## Dear customer,

In the last few years not only has the size of our company grown but also its product line. In addition to our own innovations that open new opportunities, complementary products to help find solutions to the diverse market requirements have also been included. It was time to sort out our range.

You will find a new layout with the subdivision of the products according to their application areas – automation control, motion control, vibration control and safety products. Each segment is identified by its own colour. The integrated concept can be found reflected in all of the documents in the new demonstration car, at our exhibition stand and on the new website [www.ace-ace.com](http://www.ace-ace.com). Our website, the tool for professionals, also offers the ACE You Tube channel, an extensive CAD library as well as calculation assistance.

As usual, you will find the news displayed in the table of contents and on the individual catalogue pages. You can see any time the full and actual ACE product portfolio under [www.ace-ace.com/com/products.html](http://www.ace-ace.com/com/products.html).

ACE products help you keep your production and processes faster, more efficient, quieter, easier, safer and more sustainable. Expect ACE quality in the products and the 5 star service.

## Your

Jürgen Roland (Managing Director)

### Free Service Hotline

Tell us about your requirements and take advantage of our more than 40 years of expert knowledge in damping technology. Our specialists in engineering discuss your requirements with you and demonstrate our possibilities. Take advantage of our service hotline

**T +49 (0)2173 - 9226-4100**

Also, our regional managers are genuine shock absorber specialists. They will visit you onsite, note down the field data and work out customized solutions for you.

Furthermore: ACE service support and products are available in more than 40 countries worldwide.

### CAD Online Calculation Program

With our user-friendly calculation program in the internet you can select the right product – online or via download of the program. The CAD data is available in all standard formats in 2D and 3D.

[www.ace-ace.com](http://www.ace-ace.com)

Our specialist engineers create detailed technical solutions for you including assembly suggestions and details on machine loads, brake time and workload etc.

## Certified Quality

ACE products are exclusively manufactured from high quality and environmentally compatible materials. With permanent quality monitoring and the performance of test programs, a constant high quality can be guaranteed.

ACE pursues continual improvement in all areas in order to arrange material and energy consumption, the production of damaging substances and recycling or disposal of end products as gently on resources as possible.

It is important to us to keep the strain on the environment as low as possible and simultaneously improve our services.

With ongoing optimisation of end products, we also give our customers the option of designing their products to be smaller, more effective and more energy-saving.

Miniature Shock Absorbers, Industrial Shock Absorbers, Heavy Industrial Shock Absorbers, Profile Dampers, Damping Pads

Hydraulic Dampers, Hydraulic Feed Controls, Rotary Dampers

Rubber-Metal Isolators, Vibration-Isolating Pads, Low Frequency Pneumatic Levelling Mounts

Safety Shock Absorbers, Safety Dampers, Clamping Elements

## We are your Specialists for Industrial Damping Technology

**ACE is the world's globally recognized specialist in the field of industrial damping technology – with agencies in 45 countries on all continents. ACE has also been represented in Germany since 1978. Here 25 engineers work every day on the further development of the product range.**

ACE customers benefit from sophisticated solutions, valuable innovations and exemplary service around the topic of damping technology. Through close cooperation with leading engineering companies, in particular the German ACE subsidiary has established itself as a pioneer in the field of technical progress in damping technology.

This catalogue is the decisive step to let the frequently expressed customer request come true: to supply everything for damping technology and vibration isolation from one single source.

ACE develops, produces and sells a wide range of damping products. It comprises industrial and safety shock absorbers, profile dampers, rotary dampers, industrial gas springs, hydraulic dampers, vibration isolators, air springs and hydraulic feed controls.

The products assert themselves particularly in future-oriented companies because there are virtually no better solutions to quickly, gently and precisely slow down moving masses or to isolate harmful vibrations.

## Optimum Tuning

### Tailor-made solutions for any application

**Kinetic energy is turned into heat by the universal use ACE damping solutions. This makes machines faster, quieter, more durable, lighter and therefore more competitive and profitable.**

Here you will find the perfect selection of machine element, which turn damaging forces into harmless heat. These solutions from ACE smoothly decelerate moving loads. This involves the lowest possible strain on machines, which makes the damping products from ACE so valuable.

# Industrial Shock Absorbers

## Standard-setting damping solutions

The name says it all: **ACE Stoßdämpfer GmbH** (“the ACE shock absorber company”). That ACE is considered the technology and market leader on a worldwide scale for small, medium-sized and heavy industrial shock absorbers is a result of the successful blend of quality, performance and the durability of the solutions.

ACE provides the right shock absorber for every industrial purpose. Over 200 different models are available, from the smallest model with a 4 mm stroke up to the biggest with 406 mm.

Whether self-compensating or adjustable, with ACE dampers between 0.68 Nm/cycle and 5,400 Nm/cycle can be absorbed and effective weights between 500 g and 204 t can be decelerated with great precision.

In addition, ACE damping solutions impress with competent consulting, exemplary service and ideal matching accessories.

ACE demo showing a wine glass dropping free fall 1.3 m.

Decelerated by a shock absorber not a drop of wine is spilled.

### Stopping with Industrial Shock Absorbers

#### Your advantages using industrial shock absorbers

- Safe, reliable production
- Long service life of the machines
- Easy, inexpensive constructions
- Low operating costs
- Quiet, economical machines
- Less stress on the machine
- Profit improvement

### Stopping with Rubber Buffers, Springs, Dashpots or Cylinder Cushions

#### Results using conventional dampers

- Loss of production
- Machine damage
- Increased maintenance costs
- Increased operating noise
- Higher machine construction costs

### Comparison of Different Damping Elements

When it comes to slowing down moving masses with constant damping force through the stroke, the industrial shock absorber is the right choice. A comparison demonstrates the differences of the damping elements.

**ACE Industrial Shock Absorbers (Uniform stopping force through the entire stroke)**

The moving load is smoothly and gently brought to rest by a constant resisting force throughout the entire shock absorber stroke. The load is decelerated with the lowest possible force in the shortest possible time eliminating damaging force peaks and shock damage to machines and equipment. This is a linear deceleration force stroke curve and is the curve provided by ACE industrial shock absorbers. In addition they considerably reduce noise pollution.

**Hydraulic Dashpot (High stopping force at start of the stroke)**

With only one metering orifice the moving load is abruptly slowed down at the start of the stroke. The braking force rises to a very high peak at the start of the stroke (giving high shock loads) and then falls away rapidly.

**Springs and Rubber Buffers (High stopping forces at end of stroke)**

At full compression. Also they store energy rather than dissipating it, causing the load to rebound back again.

**Air Buffers, Pneumatic Cylinder Cushions (High stopping force at end of stroke)**

Due to the compressibility of air these have a sharply rising force characteristic towards the end of the stroke. The majority of the energy is absorbed near the end of the stroke.

**Comparison**

The comparison shows the differences of the damping in a direct comparison of stopping force to stopping stroke.

### General Function of the Pressure Chamber

If a moving mass hits the industrial shock absorber, the piston puts the oil in the pressure chamber into motion. The oil is pressed through the metering orifices, which converts the discharged energy into heat. The metering orifices are arranged on the stroke so that the mass is retarded with a constant damping force. The hydraulic pressure is maintained throughout the entire braking process nearly constant.

\* The load velocity reduces continuously as you travel through the stroke due to the reduction in the number of metering orifices (\*) in action. The internal pressure remains essentially constant and thus the force vs. stroke curve remains linear.

F = force (N), p = internal pressure (bar)  
s = stroke (m), t = deceleration time (s),  
v = velocity (m/s)

## Calculation Bases for the Design of Industrial Shock Absorbers

ACE shock absorbers provide linear deceleration and are therefore superior to other kinds of damping element. It is easy to calculate around 90 % of applications knowing only the following five parameters:

1. Mass to be decelerated (weight) **m** [kg]
2. Impact velocity at shock absorber **v<sub>D</sub>** [m/s]
3. Propelling force **F** [N]
4. Cycles per hour **c** [/hr]
5. Number of absorbers in parallel **n**

### Key to symbols used

W <sub>1</sub>	Kinetic energy per cycle	Nm	<sup>3</sup> ST	tall torque factor (normally 2.5)	1 to 3
W <sub>2</sub>	Propelling force energy per cycle	Nm	M	Propelling torque	Nm
W <sub>3</sub>	Total energy per cycle (W <sub>1</sub> + W <sub>2</sub> )	Nm	I	Moment of Inertia	kgm <sup>2</sup>
<sup>1</sup> W <sub>4</sub>	Total energy per hour (W <sub>3</sub> · c)	Nm/hr	g	Acceleration due to gravity = 9.81	m/s <sup>2</sup>
me	Effective weight	kg	h	Drop height excl. shock absorber stroke	m
m	Mass to be decelerated	kg	s	Shock absorber stroke	m
n	Number of shock absorbers (in parallel)		L/R/r	Radius	m
<sup>2</sup> v	Velocity at impact	m/s	Q	Reaction force	N
<sup>2</sup> v <sub>D</sub>	Impact velocity at shock absorber	m/s	μ	Coefficient of friction	
ω	Angular velocity at impact	rad/s	t	Deceleration time	s
F	Propelling force	N	a	Deceleration	m/s <sup>2</sup>
c	Cycles per hour	1/hr	α	Side load angle	°
P	Motor power	kW	β	Angle of incline	°

<sup>1</sup> All mentioned values of W<sub>4</sub> in the capacity charts are only valid for room temperature. There are reduced values at higher temperature ranges.

<sup>2</sup> v or v<sub>D</sub> is the final impact velocity of the mass. With accelerating motion the final impact velocity can be 1.5 to 2 times higher than the average. Please take this into account when calculating kinetic energy.

<sup>3</sup> ST ≙ relation between starting torque and running torque of the motor (depending on the design)

In all the following examples the choice of shock absorbers made from the capacity chart is based upon the values of (W<sub>3</sub>), (W<sub>4</sub>), (me) and the desired shock absorber stroke (s).

### Note:

When using several shock absorbers in parallel, the values (W<sub>3</sub>), (W<sub>4</sub>) and (me) are divided according to the number of units used.

$$\text{Reaction force } Q \text{ [N]} \quad Q = \frac{1.5 \cdot W_3}{s}$$

$$\text{Stopping time } t \text{ [s]} \quad t = \frac{2.6 \cdot s}{v_D}$$

$$\text{Deceleration rate } a \text{ [m/s}^2\text{]} \quad a = \frac{0.75 \cdot v_D^2}{s}$$

Approximate values assuming correct adjustment. Add safety margin if necessary.  
(Exact values will depend upon actual application data and can be provided on request.)

Application	Formulae	Example
<b>1 Mass without propelling force</b> 	$W_1 = m \cdot v^2 \cdot 0.5$ $W_2 = 0$ $W_3 = W_1 + W_2$ $W_4 = W_3 \cdot c$ $v_D = v$ $m_e = m$	$m = 100 \text{ kg}$ $v = 1.5 \text{ m/s}$ $c = 500 \text{ /hr}$ $s = 0.050 \text{ m (chosen)}$  $W_1 = 100 \cdot 1.5^2 \cdot 0.5 = 113 \text{ Nm}$ $W_2 = 0$ $W_3 = 113 + 0 = 113 \text{ Nm}$ $W_4 = 113 \cdot 500 = 56500 \text{ Nm/hr}$ $m_e = m = 100 \text{ kg}$  Chosen from capacity chart: Model MC3350EUM-2 self-compensating
<b>2 Mass with propelling force</b> 	$W_1 = m \cdot v^2 \cdot 0.5$ $W_2 = F \cdot s$ $W_3 = W_1 + W_2$ $W_4 = W_3 \cdot c$ $v_D = v$ $m_e = \frac{2 \cdot W_3}{v_D^2}$	$m = 36 \text{ kg}$ $v = 1.5 \text{ m/s}$ $F = 400 \text{ N}$ $c = 1000 \text{ /hr}$ $s = 0.025 \text{ m (chosen)}$  $W_1 = 36 \cdot 1.5^2 \cdot 0.5 = 41 \text{ Nm}$ $W_2 = 400 \cdot 0.025 = 10 \text{ Nm}$ $W_3 = 41 + 10 = 51 \text{ Nm}$ $W_4 = 51 \cdot 1000 = 51000 \text{ Nm/hr}$ $m_e = 2 \cdot 51 : 1.5^2 = 45 \text{ kg}$  Chosen from capacity chart: Model MC600EUM self-compensating $v$ is the final impact velocity of the mass: With pneumatically propelled systems this can be 1.5 to 2 times the average velocity. Please take this into account when calculating energy.
2.1 for vertical motion upwards 2.2 for vertical motion downwards	$W_2 = (F - m \cdot g) \cdot s$ $W_2 = (F + m \cdot g) \cdot s$	
<b>3 Mass with motor drive</b> 	$W_1 = m \cdot v^2 \cdot 0.5$ $W_2 = \frac{1000 \cdot P \cdot ST \cdot s}{v}$ $W_3 = W_1 + W_2$ $W_4 = W_3 \cdot c$ $v_D = v$ $m_e = \frac{2 \cdot W_3}{v_D^2}$	$m = 800 \text{ kg}$ $v = 1.2 \text{ m/s}$ $ST = 2.5$ $P = 4 \text{ kW}$ $c = 100 \text{ /hr}$ $s = 0.100 \text{ m (chosen)}$  $W_1 = 800 \cdot 1.2^2 \cdot 0.5 = 576 \text{ Nm}$ $W_2 = 1000 \cdot 4 \cdot 2.5 \cdot 0.1 : 1.2 = 834 \text{ Nm}$ $W_3 = 576 + 834 = 1410 \text{ Nm}$ $W_4 = 1410 \cdot 100 = 141000 \text{ Nm/hr}$ $m_e = 2 \cdot 1410 : 1.2^2 = 1958 \text{ kg}$  Chosen from capacity chart: Model MC64100EUM-2 self-compensating Note: Do not forget to include the rotational energy of motor, coupling and gearbox into calculation for $W_1$ .
<b>4 Mass on driven rollers</b> 	$W_1 = m \cdot v^2 \cdot 0.5$ $W_2 = m \cdot \mu \cdot g \cdot s$ $W_3 = W_1 + W_2$ $W_4 = W_3 \cdot c$ $v_D = v$ $m_e = \frac{2 \cdot W_3}{v_D^2}$	$m = 250 \text{ kg}$ $v = 1.5 \text{ m/s}$ $c = 180 \text{ /hr}$ $(\text{Steel/Steel}) \mu = 0.2$ $s = 0.050 \text{ m (chosen)}$  $W_1 = 250 \cdot 1.5^2 \cdot 0.5 = 281 \text{ Nm}$ $W_2 = 250 \cdot 0.2 \cdot 9.81 \cdot 0.05 = 25 \text{ Nm}$ $W_3 = 281 + 25 = 306 \text{ Nm}$ $W_4 = 306 \cdot 180 = 55080 \text{ Nm/hr}$ $m_e = 2 \cdot 306 : 1.5^2 = 272 \text{ kg}$  Chosen from capacity chart: Model MC4550EUM-2 self-compensating
<b>5 Swinging mass with propelling force</b> 	$W_1 = m \cdot v^2 \cdot 0.5 = 0.5 \cdot l \cdot \omega^2$ $W_2 = \frac{M \cdot s}{R}$ $W_3 = W_1 + W_2$ $W_4 = W_3 \cdot c$ $v_D = \frac{v \cdot R}{L} = \omega \cdot R$ $m_e = \frac{2 \cdot W_3}{v_D^2}$	$m = 20 \text{ kg}$ $v = 1 \text{ m/s}$ $M = 50 \text{ Nm}$ $R = 0.5 \text{ m}$ $L = 0.8 \text{ m}$ $c = 1500 \text{ /hr}$ $s = 0.012 \text{ m (chosen)}$  $W_1 = 20 \cdot 1^2 \cdot 0.5 = 10 \text{ Nm}$ $W_2 = 50 \cdot 0.012 : 0.5 = 1.2 \text{ Nm}$ $W_3 = 10 + 1.2 = 11.2 \text{ Nm}$ $W_4 = 11.2 \cdot 1500 = 16800 \text{ Nm/hr}$ $v_D = 1 \cdot 0.5 : 0.8 = 0.63 \text{ m/s}$ $m_e = 2 \cdot 11.2 : 0.63^2 = 56 \text{ kg}$  Chosen from capacity chart: Model MC150EUMH self-compensating Check the side load angle, $\tan \alpha = s/R$ , with regard to "Max. Side Load Angle" in the capacity chart (see example 6.2)
<b>6 Free falling mass</b> 	$W_1 = m \cdot g \cdot h$ $W_2 = m \cdot g \cdot s$ $W_3 = W_1 + W_2$ $W_4 = W_3 \cdot c$ $v_D = \sqrt{2 \cdot g \cdot h}$ $m_e = \frac{2 \cdot W_3}{v_D^2}$	$m = 30 \text{ kg}$ $h = 0.5 \text{ m}$ $c = 400 \text{ /hr}$ $s = 0.050 \text{ m (chosen)}$  $W_1 = 30 \cdot 0.5 \cdot 9.81 = 147 \text{ Nm}$ $W_2 = 30 \cdot 9.81 \cdot 0.05 = 15 \text{ Nm}$ $W_3 = 147 + 15 = 162 \text{ Nm}$ $W_4 = 162 \cdot 400 = 64800 \text{ Nm/hr}$ $v_D = \sqrt{2 \cdot 9.81 \cdot 0.5} = 3.13 \text{ m/s}$ $m_e = 2 \cdot 162 : 3.13^2 = 33 \text{ kg}$  Chosen from capacity chart: Model MC3350EUM-1 self-compensating

### Effective Weight (me)

The effective weight (me) can either be the same as the actual weight (examples A and C), or it can be an imaginary weight representing a combination of the propelling force or lever action plus the actual weight (examples B and D).

Application	Example
<p><b>A Mass without propelling force</b></p> <p>Formula  <math>me = m</math></p> 	<p><math>m = 100 \text{ kg}</math>  <math>v_D = v = 2 \text{ m/s}</math>  <math>W_1 = W_3 = 200 \text{ Nm}</math>  <math>me = \frac{2 \cdot 200}{4} = 100 \text{ kg}</math></p>
<p><b>B Mass with propelling force</b></p> <p>Formula  <math>me = \frac{2 \cdot W_3}{v_D^2}</math></p> 	<p><math>m = 100 \text{ kg}</math>  <math>F = 2000 \text{ N}</math>  <math>v_D = v = 2 \text{ m/s}</math>  <math>s = 0.1 \text{ m}</math>  <math>W_1 = 200 \text{ Nm}</math>  <math>W_2 = 200 \text{ Nm}</math>  <math>W_3 = 400 \text{ Nm}</math>  <math>me = \frac{2 \cdot 400}{4} = 200 \text{ kg}</math></p>
<p><b>C Mass without propelling force direct against shock absorber</b></p> <p>Formula  <math>me = m</math></p> 	<p><math>m = 20 \text{ kg}</math>  <math>v_D = v = 2 \text{ m/s}</math>  <math>s = 0.1 \text{ m}</math>  <math>W_1 = W_3 = 40 \text{ Nm}</math>  <math>me = \frac{2 \cdot 40}{2^2} = 20 \text{ kg}</math></p>
<p><b>D Mass without propelling force with mechanical advantage</b></p> <p>Formula  <math>me = \frac{2 \cdot W_3}{v_D^2}</math></p> 	<p><math>m = 20 \text{ kg}</math>  <math>v = 2 \text{ m/s}</math>  <math>v_D = 0.5 \text{ m/s}</math>  <math>s = 0.1 \text{ m}</math>  <math>W_1 = W_3 = 40 \text{ Nm}</math>  <math>me = \frac{2 \cdot 40}{0.5^2} = 320 \text{ kg}</math></p>

# Miniature Shock Absorbers

## Tuning for almost any design

**Miniature shock absorbers from ACE are tried-and-tested quality products used in millions of industrial construction designs throughout the world. They optimise machines in an equally reliable and effective way by decelerating loads quickly and without recoil.**

The compact, maintenance-free, hydraulic machine elements can be easily and quickly integrated in any construction design and certain models can be directly integrated in pneumatic cylinders. They reduce the load on handling devices, rotary and pivoting actuators, linear cylinders and many other industrial applications and increase their efficiency. Innovative ACE sealing techniques and shock absorber bodies and inner pressure chambers, fully machined from solid high tensile alloy, tube-shaped steel, ensure a long service life.

Easy, inexpensive constructions

Large variety of models for every purpose

Less stress on the machine

Reduced operating costs

Maintenance-free

## Miniature Shock Absorbers

### Shock absorbers in miniature format

Ideal for compact, efficient designs: The MC5 to 75 series impresses users with their reduced dimensions and their very short overall lengths and low resetting forces after braking.

The outer body of each damper, produced from one solid piece, are filled with temperature stable oil, offer a continuous thread incl. a supplied lock nut and also have an integrated positive stop. These hydraulic machine elements from ACE, are ready for immediate installation and are maintenance-free. A comprehensive range of energy absorption with a wide range of effective weight potential are further benefits in these miniature units.

These miniature shock absorbers are perfectly suited to use in applications such as mechanical engineering, medical and electro-technology and robotics.

### Technical Data

**Energy capacity:** 0.68 Nm/Cycle to 9 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 4 m/s

**Operating temperature range:** -10 °C to +66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body, Accessories: Steel corrosion-resistant coating; Piston rod: Hardened stainless steel; Rod end button: Steel, MC25 and MC75: Elastomer Insert; Locknut: Steel, MC5 and MC9: Aluminium

**Damping medium:** Oil, temperature stable

**Application field:** Miniature slides, Pneumatic cylinders, Handling modules, Copiers

**Note:** If precise end position datum is required consider use of the stop collar type AH.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Increased corrosion protection. Special finishes. Models without rod end button also available on request.

<sup>1</sup> For applications with higher side load angles consider using the side load adaptor (BV) pages 38 to 45.

# MC150 to MC600

## Miniature Shock Absorbers

**Exceptionally high endurance and with the lowest resetting force**

Tried-and-tested and durable: Due to a hermetically sealed rolling diaphragm in each absorber, the MC150 to MC600 product family is suitable for an exceptional high lifetime of use with up to 25 million cycles. The rolling diaphragm technology perfected by ACE ensures complete separation of the damping fluid from the surrounding air. This makes direct installation in a pressure chamber e.g. as end stop damping in pneumatic cylinders up to approx. 7 bar possible.

The rolling diaphragm also benefits the very low return forces of these maintenance-free, ready-to-install absorbers. Progressive energy capacities, with a wide range of effective weight potential make these miniature shock absorbers, complete with an integrated positive stop a winner. Furthermore, the use of a side load adapter allows impact angles of up to 25°.

Miniature shock absorbers capable of universal mounting even inside a cylinder and also available in stainless steel options. They are often used in mechanical and plant engineering, and a multitude of other applications.

### Technical Data

**Energy capacity:** 20 Nm/Cycle to 136 Nm/Cycle

**Impact velocity range:** 0.06 m/s to 6 m/s. Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body, Accessories: Steel corrosion-resistant coating; Main bearing: Plastic; Piston rod: Hardened stainless steel (1.4125, AISI 440C); Rolling diaphragm: EPDM

**Damping medium:** Oil, temperature stable

**Application field:** Linear slides, Pneumatic cylinders, Swivel units, Handling modules

**Note:** If precise end position datum is required consider use of the stop collar type AH.

**Safety instructions:** External materials in the surrounding area can attack the rolling seal and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Suitable for use in pressure chambers up to 7 bar.

**On request:** Increased corrosion protection. Special threads or other special options.

## MC150-V4A to MC600-V4A

### Miniature Shock Absorbers

#### Exceptionally high endurance with stainless steel corrosion protection

Brilliant in every respect: These high performance miniature shock absorbers in stainless steel are based on the MC150 to MC600 product family and its proven damping technology. This means that these special absorbers offer all of the benefits of the MC standard units such as the proven ACE rolling diaphragm technology for maximum service life and direct installation in a pressure chamber with up to approx. 7 bar.

Thanks to perfectly progressive maximum energy absorption and effective weight potential, their use is augmented even further by the outer body and a complete range of accessories made of stainless steel (material 1.4404).

Miniature shock absorbers made of stainless steel are mainly used in medical and electro-technology, but also in shipbuilding, packaging and chemicals industry and in the food processing. For the latter, they are filled with a special oil in order to fulfil the authorisation conditions (NSF-H1) for this market.

#### Technical Data

**Energy capacity:** 20 Nm/Cycle to 136 Nm/Cycle

**Impact velocity range:** 0.06 m/s to 6 m/s.  
Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body, Locknut, Accessories: Stainless steel (1.4404, AISI 316L); Main bearing: Plastic; Piston rod: Hardened stainless steel (1.4125, AISI 440C); Rolling diaphragm: EPDM

**Damping medium:** Oil, temperature stable

**Application field:** Clean room areas, Pharmaceutical industry, Medical technology, Food industry

**Note:** If precise end position datum is required consider use of the stop collar type AH.

**Safety instructions:** External materials in the surrounding area can attack the rolling seal and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Suitable for use in pressure chambers up to 7 bar.

**On request:** Special oil with food approval. Special threads or other special options available on request.

## PMC150 to PMC600 Miniature Shock Absorbers

### Reliable protection against fluids

Hermetically sealed: The shock absorbers from the ACE Protection series PMC have a compact, perfectly sealed cap as a special feature.

This protection bellows, made of PTFE (Teflon), safely encapsulates the proven ACE rolling diaphragm from the outside environment. Aggressive cutting, lubricating and cleaning agents don't stand a chance and the function of the maintenance-free, ready-to-install shock absorber is retained. They are also available in full stainless steel.

The PMC series is a good alternative to the SP type air bleed collar if no compressed air is available on the machine or system.

Reliable protection against aggressive fluids, these miniature shock absorbers are the first choice everywhere where conventional dampers wear out too quickly, eg. As in machining centers or other applications of mechanical engineering.

### Technical Data

**Energy capacity:** 20 Nm/Cycle to 136 Nm/Cycle

**Impact velocity range:** 0.06 m/s to 6 m/s.  
Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Steel corrosion-resistant coating; Main bearing: Plastic; Piston rod: Hardened stainless steel (1.4125, AISI 440C); Bellow: PTFE, steel insert: Stainless steel (1.4404/1.4571, AISI 316L/316Ti); Rolling diaphragm: EPDM

**Damping medium:** Oil, temperature stable

**Application field:** Finishing and processing centres, Clean room areas, Pharmaceutical industry, Medical technology

**Note:** Final preliminary test must be done on the application.

**Safety instructions:** The volume of the hermetically sealed PTFE bellows is displaced by volume compensation of the rolling diaphragm seal.

**On request:** Special accessories available on request.

# PMC150-V4A to PMC600-V4A

## Miniature Shock Absorbers

### Optimum corrosion protection

Hermetically sealed and rustproof: The Protection series PMC is also available in a stainless steel design. This is of particular interest to the food and packaging industries.

Their main special feature is the compact, totally sealed bellow between the body and the cap made of PTFE (Teflon). This protection safely encapsulates the ACE rolling diaphragm from the outside environment. Aggressive fluids don't stand a chance. The PMC series is an excellent alternative if the accessory option of the SP type air bleed collar cannot be used due to a lack of compressed air.

The PMC series miniature shock absorbers, produced from stainless steel, are primarily suitable for use in the food industry, but are also wherever an elegant look is important e.g. in shipbuilding.

# SC190 to SC925

## Miniature Shock Absorbers

### Long stroke and soft impact

Ideal for soft damping: The SC found in the model code from the ACE series SC190 to 925 stands for 'soft contact'. These miniature shock absorbers manufactured from one solid piece are designed in such a way that they can be setup with a linear or a progressive braking curve. The soft damping character is thanks to the special, long strokes producing smooth deceleration and low reaction forces.

These maintenance-free, ready-to-install hydraulic machine elements are equipped with an integrated positive stop. The use of side load adapter allows impact angles of up to 25°. Thanks to the designed overlapping effective weight ranges, these dampers cover an effective load range of below 1 kg to more than 2,000 kg!

The miniature shock absorbers from the SC190 to 925 series are used in mechanical engineering and primarily in the areas of handling and automation.

### Technical Data

**Energy capacity:** 25 Nm/Cycle to 110 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 3.66 m/s. Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body, Accessories: Steel corrosion-resistant coating; Piston rod: Hardened stainless steel

**Damping medium:** Oil, temperature stable

**Application field:** Linear slides, Pneumatic cylinders, Handling modules, Machines and plants

**Note:** If precise end position datum is required consider use of the stop collar type AH.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Nickel-plated or weartec finish (seawater resistant) or other special finishes available to special order. Models without rod end button.

<sup>1</sup> For applications with higher side load angles consider using the side load adaptor (BV) pages 38 to 45.

# SC<sup>2</sup>25 to SC<sup>2</sup>190

## Miniature Shock Absorbers

### Piston tube design for maximum energy absorption

Soft damping, but enormous capacity: The range of 'soft contact' absorbers SC<sup>2</sup>25 to 190 extends from thread size M10 to M14 and covers effective weight ranges of 1 kg to 1,550 kg. All models are characterised by high energy absorption and they also unite the piston tube technology with the diaphragm seal perfected by ACE. This enables direct installation as end position damping in pneumatic cylinders at 5 to 7 bar or applications where deceleration needs to take place close to the pivot point.

They are maintenance-free, have an integrated positive stop and are mountable in any position. The option of a side load adapter allows impact angles of up to 25°.

Thanks to their robust design and their durability, these miniature shock absorbers can be used for a wide range of applications. Designers mainly use them for pick and place systems, pneumatic rotary modules and in automation applications.

### Technical Data

**Energy capacity:** 10 Nm/Cycle to 31 Nm/Cycle

**Impact velocity range:** 0.1 m/s to 5.7 m/s. Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body, Accessories: Steel corrosion-resistant coating; Piston rod: Hardened stainless steel; Rolling diaphragm: SC<sup>2</sup>190: EPDM; Stretch diaphragm: SC<sup>2</sup>25 and SC<sup>2</sup>75: Nitrile

**Damping medium:** Oil, temperature stable

**Application field:** Linear slides, Pneumatic cylinders, Swivel units, Handling modules

**Note:** If precise end position datum is required consider use of the stop collar type AH.

**Safety instructions:** External materials in the surrounding area can attack the rolling and stretch seals and lead to a shorter service life. Please contact ACE for appropriate solution suggestions.

**On request:** Increased corrosion protection. Special finishes.

## SC<sup>2</sup>300 to SC<sup>2</sup>650 Miniature Shock Absorbers

### Piston tube design for maximum energy absorption

Added safety with accumulator technology:

The larger 'soft contact' models from the SC<sup>2</sup>300 to 650 are available with up to three times the energy absorption compared to similar sizes of standard shock absorbers SC190 to 925, due to the ACE piston tube speciality. Furthermore, the membrane accumulator serves as a compensation element for the oil displaced in the shock absorber and replaces the standard use of absorber materials. This increases process safety even further.

The absorbers, which are perfect for rotary modules for example, are available in progressively stepped effective weight ranges with an integrated positive stop. They are maintenance-free and ready for direct installation. The side load adapter option allows impact angles of up to 25°.

These miniature shock absorbers offer high performance levels with a long service life and are particularly popular for handling, mounting very close to pivots and automation tasks.

#### Technical Data

**Energy capacity:** 73 Nm/Cycle to 210 Nm/Cycle

**Impact velocity range:** 0.09 m/s to 3.66 m/s. Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Steel corrosion-resistant coating; Piston rod: Hardened stainless steel; Accessories: Hardened steel and corrosion-resistant coating

**Damping medium:** Oil, temperature stable

**Application field:** Turntables, Swivel units, Robot arms, Linear slides

**Note:** If precise end position datum is required consider use of the stop collar type AH.

**On request:** Increased corrosion protection. Special finishes.

Adjustable

## MA30 to MA900

### Miniature Shock Absorbers

#### Stepless adjustment

**Exact adjustment:** The miniature shock absorbers from the MA30 to 900 series can be adjusted and precisely adapted to your requirements. For example, the MA150 displays the rolling diaphragm technology from the MC150 to 600 series and offers all of the advantages of this technology, such as use in pressure chambers. Thanks to long strokes (including 40 mm on the MA900) lower reaction forces result, which provide a soft damping characteristic.

All variations of these units are maintenance-free, ready-to-install machine elements and have an integrated positive stop. They provide the best service where application data changes, where the calculation parameters are not clear or where maximum flexibility in the possible usage is required.

The adjustable miniature shock absorbers from ACE can be used to meet precisely the customer's application and are therefore found everywhere in mechanical engineering and many other applications.

#### Technical Data

**Energy capacity:** 3.5 Nm/Cycle to 100 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 4.5 m/s. Other speeds on request.

**Operating temperature range:** 0 °C to 66 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Adjustment:** Hard impact at the start of stroke, adjust the ring towards 9 or PLUS. Hard impact at the end of stroke, adjust the ring towards 0 or MINUS.

**Material:** Outer body, Accessories: Steel corrosion-resistant coating; Piston rod: Hardened stainless steel

**Damping medium:** Oil, temperature stable

**Application field:** Linear slides, Pneumatic cylinders, Swivel units, Handling modules

**Note:** If precise end position datum is required consider use of the stop collar type AH. Shock absorber is preset at delivery in a neutral position between hard and soft.

**Safety instructions:** External materials in the surrounding area can attack the rolling diaphragm seal and lead to a shorter service

life. Please contact ACE for appropriate solution suggestions.

**On request:** Nickel-plated or other special options available to special order. Models without rod end button.

### AH

### Stop Collar

All ACE miniature shock absorbers (except FA series) have an integral positive stop. An optional stop collar (AH...) can be added if desired to give fine adjustment of final stopping position.

### MB

### Clamp Mount

When using the MB clamp mount no locknut is needed on the shock absorber (split clamp action). The clamp mount is very compact and allows fine adjustment of the shock absorber position by turning in and out.

#### Safety instructions

When foot mounting the types with combined piston and inner tube SC<sup>2</sup>25EUM to SC<sup>2</sup>650EUM and the types MC5EUM, MC9EUM, MC30EUM, MC25EUM and MA30EUM, the mounting block MB (SC<sup>2</sup>) must be used.

#### Delivery

Two socket head screws are included with the clamp mount.

#### Dimensions

TYPES	Screw Size	Max. Torque Nm
MB12	M5x16	6
MB14	M5x20	6
MB20	M6x25	11
MB25	M6x30	11

### MB...SC2

### Mounting Block

The mounting block MB...SC2 ensures the stable fixation of shock absorbers of the SC<sup>2</sup>-Series. Due to the piston tube technology of this series, this mounting block has no clamp slot.

#### Mounting information

As the MB (SC<sup>2</sup>) has no clamp slot, the shock absorber has to be tightened with the supplied locknut.

#### Delivery

Two socket head screws are included with the clamp mount.

### RF

### Rectangular Flange

The rectangular flange RF provides a space saving convenient assembly and does not need a lock nut to hold the shock absorber. Therefore achieving a neat, compact and flat surface mounting.

#### Dimensions

TYPES	Screw Size	Max. Torque Nm
RF6	M3x8	3
RF8	M4x10	4
RF10	M4x10	4
RF12	M5x12	6
RF14	M5x12	6
RF20	M6x14	11
RF25	M6x14	11

Technical Information

**PB**

**Steel Shroud**

Grinding beads, sand, welding splatter, paints and adhesives etc. can adhere to the piston rod. They then damage the rod seals and the shock absorber quickly fails. In many cases the installation of the optional steel shroud can provide worthwhile protection and increase lifetime.

**Ordering information**

The PB steel shroud can only be installed onto a shock absorber without rod end button.

For part number MA, MC, SC please order with "M-880" suffix. Part numbers MA150EUM, MC150EUM to MC600EUM and SC25EUM to SC190EUM5-7 are supplied without a button.

**Safety instructions**

When installing don't forget to allow operating space for the shroud to move as the shock absorber is cycled.

**SP**

**Air Bleed Collar**

Air bleed collar (includes integral stop collar) protects shock absorber from ingress of abrasive contaminants like cement, paper or wood dust into the rod seal area. It also prevents aggressive fluids such as cutting oils, coolants etc. damaging the seals. Air bleed supply 0.5 to 1 bar. Low air consumption. The constant air bleed prevents contaminants passing the wiper ring and entering the shock absorber seal area.

**Safety instructions**

Do not switch off air supply whilst machine is operating! The air bleed collar cannot be used on all similar body thread sized shock absorbers. The air bleed collar is only for types MC150EUM to MC600EUM, MA150EUM, SC75EUM and SC190EUM5-7.

**PP**

**Nylon Button**

While the use of industrial shock absorbers already achieves a considerable reduction in noise levels, the additional use of PP impact buttons made of glass fibre reinforced nylon reduces noise levels even further, making it easy to fulfil the regulations of the new Noise Control Ordinance. At the same time, wear of impact surface is drastically minimized. The PP buttons are available for shock absorbers in series MC150EUM to MC600EUM.

**Mounting information**

The buttons are fitted simply by pressing onto the piston rod.

**Delivery**

Model MA150EUM is supplied as standard with PP button.

**BP**

**Steel/Urethane Button**

These impact buttons made of urethane offer all above advantages of the PP nylon button in terms of reducing noise and wear. They fit easily onto the piston rod of the corresponding shock absorber.

Please refer to the accessories table on pages 36 to 37 to see which shock absorber types the BP buttons are available for.

### BV

#### Formulae:

$$\alpha = \tan^{-1} \left( \frac{s}{R_s} \right) \quad R_{s \min} = \frac{s}{\tan \alpha_{\max}}$$

#### Example:

$$s = 0.025 \text{ m} \quad \alpha_{\max} = 25^\circ \text{ (Type BV25)}$$

$$R_s = 0.1 \text{ m}$$

$$\alpha = \tan^{-1} \left( \frac{0.025}{0.1} \right) \quad R_{s \min} = \frac{0.025}{\tan 25}$$

$$\alpha = 14.04^\circ \quad R_{s \min} = 0.054 \text{ m}$$

$\alpha$	= side load angle °	$R_s$	= mounting radius m
$\alpha_{\max}$	= max. angle °	$R_{s \min}$	= min. possible mounting radius m
s	= absorber stroke m		

### Side Load Adaptor

Rotating impact motion causes high side load forces on the piston rod. This increases bearing wear and possibly results in rod breakage or bending. With side load impact angles of more than 3° the operation lifetime of the shock absorber reduces rapidly due to increased wear of the rod bearings. The optional BV side load adaptor provides long lasting solution.

#### Ordering information

The BV adaptor can only be installed onto a shock absorber without rod end button.

Part Number: MA, MC, SC...-880

(Models MC150EUM to MC600EUM and SC<sup>2</sup>25EUM to SC<sup>2</sup>190EUM5-7 are supplied as standard without buttons.)

#### Material

Threaded body and plunger: Hardened high tensile steel, hardened 610 HV1

#### Mounting information

Secure the side load adaptor with Loctite or locknut on the shock absorber.

For material combination plunger/impact plate use similar hardness values. We recommend that you install the shock absorber/side load adaptor using the thread on the side load adaptor.

Installation with clamp mount MB... not possible. Use mounting block MB... SC<sup>2</sup>!

#### Safety instructions

Maximum angle:

BV8, BV10 and BV12 = 12.5°

BV14, BV20 and BV25 = 25°

By repositioning the centre of the stroke of the side load plunger to be at 90 degrees to the piston rod, the side load angle can be halved. The use of an external positive stop due to high forces encountered is required.

Technical Information

AS

Switch Stop Collar

The ACE stop light switch stop collar combination AS, incl. proximity switch PNP, can be mounted on all popular shock absorber models. The use of the steel button PS is mandatory.

Advantages: Very short, compact mounting package, good price-performance ratio, retrofit possible for standard shock absorber models, fine adjustment of the stroke possible.

Ordering information

The steel button type PS is fitted as standard on the models: SC190EUM0-4, SC300EUM0-9, SC650EUM0-9, SC925EUM0-4, MA/MVC225EUM, MA/MVC600EUM and MA/MVC900EUM. With all other models you must order the PS button as an optional accessory.

Mounting information

We recommend to fix the steel button onto the end of the piston rod using Loctite 290. Attention! Take care not to leave any adhesive on the piston rod as this will cause seal damage. Thread the switch stop collar onto the front of the shock absorber and secure in position. Switch cable should not be routed close to power cables.

250-3 PNP

Proximity Switch

The proximity switch is part of the ACE stop light switch collar combination. The correct starting position can thus be checked electronically.

Ordering information

Part number: 250-3 PNP

PNP proximity switch data

- Supply voltage: 10-27 VDC
- Ripple: < 10 %
- Load current max.: 100 mA
- Operating temperature range: -10 °C to +60 °C
- Residual voltage: max. 1 V
- Protection: IP67 (IEC 144) with LED-indicator
- Proximity switch N/Open when shock absorber extended.
- When shock absorber is fully compressed switch closes and LED indicator lights.

## Application Examples

### MC25EUM

#### Constant deceleration force

ACE miniature shock absorbers are the right alternative. This pneumatic module for high precision, high speed motion intentionally abandoned pneumatic end-of-travel damping. The compact miniature shock absorbers of the type MC25EUMH-NB decelerate the linear motion safer and faster when reaching the end-of-travel position. They accept the moving load gently and decelerate it smoothly throughout the entire stroke length. Additional advantages: simpler construction, smaller pneumatic valves, lower maintenance costs as well as reduced compressed air consumption.

Miniature Shock Absorber in compact pneumatic module

### SC190EUM

#### Soft end-of-travel damping on rotary movements

ACE miniature shock absorbers optimize production with minimum expenditure. The cycle rate for an assembly line producing electronic components was increased to 3,600 units/hr. Miniature shock absorbers type SC190EUM-1 decelerate the rapid transfer movements on the production line and using soft damping methods optimize the pick up and set down of components. This soft deceleration technique has increased production and reduced maintenance on the portal and rotary actuator modules. The optional side load adaptor protects the shock absorber from high side load forces and increases the operating lifetime. Using ACE shock absorbers reduces maintenance costs by 50 % and running costs by 20 %, diminishing energy consumption.

Optimised production in the electronics industry

# Industrial Shock Absorbers

## Absorbers to suit – for all loads

**ACE industrial shock absorbers work hard. Their application means moving loads are evenly decelerated over the full stroke. The result: the lowest braking force and shortest braking time. The MAGNUM series from ACE is viewed as the reference standard for medium design sizes in damping technology.**

Innovations such as diaphragm accumulators, seals, tube-shaped inner pressure chambers and many more make a decisive contribution towards extension of the service life. This means that the effective load range can be extended considerably, which provides users with more scope with respect to the absorber size and utilisation of the machine's output. ACE offers a wide range of matching accessories for this and all other absorber series. This eliminates internal production of assembly parts, which involves high costs and lots of time.

Innovative damping techniques

Reference class for medium sizes

Less stress on the machine

Increase of production figures

Long machine service lives

## MC33 to MC64 Industrial Shock Absorbers

### High energy absorption and robust design

The latest damper technology: The combination of the latest sealing technology, annealed guide bearing and integrated positiv stop make these self-compensating shock absorbers from ACE'S MAGNUM range so successful. After all, users benefit from the longer service life of the products, even in the most difficult environments. A continuous outer thread and extensive accessories make their contribution to the success story of the MC33 to MC64.

High energy absorption in a compact design and a wide damping range lead to huge advantages in practice. Alongside generally more compact designs, these small yet very powerful absorbers enable full use of the machine's performance.

These self-compensating industrial shock absorbers are used in all areas of mechanical engineering – especially in automation and for gantries.

### Technical Data

**Energy capacity:** 155 Nm/Cycle to 5,100 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 5 m/s.  
Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Nitride hardened steel; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Return spring: Zinc plated or

plastic-coated steel; Accessories: Steel with black oxide finish or nitride hardened

**Damping medium:** Automatic Transmission Fluid (ATF)

**Application field:** Linear slides, Swivel units, Turntables, Portal systems

**Note:** A noise reduction of 3 to 7 dB is possible when using the special impact button (PP). For emergency use only applications and for continuous use (with additional cooling) it is sometimes possible to exceed the published max. capacity ratings. In this case, please consult ACE.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Special oils, nickel-plated, increased corrosion protection, mounting inside air cylinders or other special options are available on request.

<sup>1</sup> For emergency use only applications it is sometimes possible to exceed the above ratings. Please consult ACE for further details.

<sup>2</sup> The effective weight range limits can be raised or lowered to special order.

<sup>3</sup> For applications with higher side load angles consider using the side load adaptor (BV) pages 74 to 77.

## MC33-V4A to MC64-V4A

### Industrial Shock Absorbers

#### Optimum corrosion protection

The latest damper technology in stainless steel: The self-compensating industrial shock absorbers MC33 to MC64 from the tried-and-tested and popular MAGNUM series is also available with all outer components made from stainless steel (material 1.4404). They are filled in the factory with special oil, which meets the permit conditions (NSF-H1) for the food industry.

Just like the standard product family, the MAGNUM stainless steel models are distinguished by their robust, modern sealing technology, high energy absorption in a compact design, integrated positive stop and a wide damping range. Equipped with a PU head, they are available in thread sizes M33x1.5 to M64x2 with damping strokes up to 100 mm.

These self-compensating industrial shock absorbers made of stainless steel from ACE are mainly used in the food, medical, electro and offshore industries, but also in many other markets.

#### Technical Data

**Energy capacity:** 155 Nm/Cycle to 5,100 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 5 m/s. Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body, Main bearing, Accessories, Locking ring: Stainless steel (1.4404, AISI 316L); Piston rod: Hard chrome plated steel; Rod end button: Stainless steel

(1.4404, AISI 316L) with elastomer insert; Return spring: Stainless steel

**Damping medium:** Special oil NSF-H1 approved

**Application field:** Linear slides, Swivel units, Turntables, Food industry

**Note:** Impact button (PP) for noise reduction included. For emergency use only applications and for continuous use (with additional cooling) it is sometimes possible to exceed the published max. capacity ratings. In this case, please consult ACE.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Special oils, other special options and special accessories are available on request.

### MC33EUM-V4A

### NM33-V4A Locking Ring

### QF33-V4A Quadratflansch

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

### Model Type Prefix

#### Standard Models

MC: Self-Contained with return spring, self-compensating

#### Special Models

MCA: Air/Oil return without return spring.

Use only with external air/oil tank.

MCS: Air/Oil return with return spring.

Use only with external air/oil tank.

MCN: Self-Contained without return spring

## MC33-HT to MC64-HT

### Industrial Shock Absorbers

#### Extreme temperatures and high cycle frequencies

Further possibilities of use: Just like all MAGNUM types from the product family MC33 to MC64, the HT (high temperature) industrial shock absorbers are also made from one solid piece. They are characterised by the use of special seals and fluids. This means that these versions can even be used at extreme temperatures of 0 °C to 150 °C in order to safely and reliably damp masses and take away 100 % kinetic energy.

There is no reason why these ready-to-install machine elements should not be used, even under the most unfavourable conditions. Additional benefits are their robust, innovative sealing technology, high energy absorption in a compact design, fixed positive stop and a wide damping range.

Designed for use in extreme temperature ranges, these self-compensating industrial shock absorbers are suitable almost anywhere in plant and mechanical engineering.

#### Technical Data

**Energy capacity:** 155 Nm/Cycle to 3,400 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 5 m/s.  
Other speeds on request.

**Operating temperature range:** 0 °C to 150 °C

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Nitride hardened steel; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Return spring: Zinc plated or plastic-

coated steel; Accessories: Steel with black oxide finish or nitride hardened

**Damping medium:** Synthetic high temperature oil

**Application field:** Linear slides, Swivel units, Turntables, Machines and plants

**Note:** A noise reduction of 3 to 7 dB is possible when using the special impact button (PP).

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution sugges-

tions. Do not paint the shock absorbers due to heat emission.

**On request:** Nickel-plated, increased corrosion protection, mounting inside air cylinders or other special options are available on request. Adjustable HT and LT shock absorbers.

**MC33EUM-HT**

Note: 150 mm stroke model does not include stop collar and positive stop is provided by the rod button (Ø 60 mm)

**NM33 Locking Ring**

## MC33-LT to MC64-LT

### Industrial Shock Absorbers

#### Extreme temperatures and high cycle frequencies

Further possibilities of use: Just like all MAGNUM types from the product family MC33 to MC64, the LT (low temperature) industrial shock absorbers are also made from one solid piece. They are characterised by the use of special seals and fluids. This means that these versions can even be used at extreme temperatures of  $-50\text{ }^{\circ}\text{C}$  to  $+66\text{ }^{\circ}\text{C}$  in order to safely and reliably damp masses and take away 100 % kinetic energy.

There is no reason why these ready-to-install machine elements should not be used, even under the most unfavourable conditions. Additional benefits are their robust, innovative sealing technology, high energy absorption in a compact design, fixed positive stop and a wide damping range.

Designed for use in extreme temperature ranges, these self-compensating industrial shock absorbers are suitable almost anywhere in plant and mechanical engineering.

#### Technical Data

**Energy capacity:** 155 Nm/Cycle to 5,100 Nm/Cycle

**Impact velocity range:** 0.15 m/s to 5 m/s. Other speeds on request.

**Operating temperature range:**  $-50\text{ }^{\circ}\text{C}$  to  $+66\text{ }^{\circ}\text{C}$

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Nitride hardened steel; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Return spring: Zinc plated or plastic-

coated steel; Accessories: Steel with black oxide finish or nitride hardened

**Damping medium:** Low temperature hydraulic oil

**Application field:** Linear slides, Swivel units, Turntables, Machines and plants

**Note:** A noise reduction of 3 to 7 dB is possible when using the special impact button (PP).

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution sugges-

tions. Do not paint the shock absorbers due to heat emission.

**On request:** Nickel-plated, increased corrosion protection, mounting inside air cylinders or other special options are available on request. Adjustable HT and LT shock absorbers.

### MC33EUM-LT

Note: 150 mm stroke model does not include stop collar and positive stop is provided by the rod button (Ø 60 mm)

### NM33 Locking Ring

### QF33 Square Flange

Torque max.: 11 Nm  
Clamping torque: > 90 Nm  
Install with 4 machine screws

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

### Complete details required when ordering

- Load to be decelerated: m (kg)
- Impact velocity: v (m/s)
- Propelling force: F (N)
- Operating cycles per hour: c (/hr)
- Number of absorbers in parallel: n
- Ambient temperature: °C

## SC33 to SC45 Industrial Shock Absorbers

### Piston tube design for maximum energy absorption

True performers: The combination the proven sealing technology from the MAGNUM series including membrane accumulator with the well-known piston tube technology from the SC<sup>2</sup> family makes the SC33 to 45 absorber models so strong and durable. The increase of the oil volume ensures the maximum braking forces. Short stroke lengths of 25 to 50 mm lead to shorter braking times in combination with a high energy absorption.

These dampers safely and reliably decelerate rotary movements without unwanted recoil effects. Assembly close to the pivot point is possible. The low impact speeds with this are managed with ease by ACE's generation of piston tubes.

These self-compensating industrial shock absorbers can be relied on in mechanical engineering. They are used in pivot units, rotary tables, robot arms or integrated else where in construction designs.

### Technical Data

**Energy capacity:** 155 Nm/Cycle to 680 Nm/Cycle

**Impact velocity range:** 0.02 m/s to 0.46 m/s. Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** In any position

**Material:** Outer body: Nitride hardened steel; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Accessories: Steel with black oxide finish or nitride hardened

**Damping medium:** Low temperature hydraulic oil

**Application field:** Turntables, Swivel units, Robot arms, Linear slides

**Note:** A noise reduction of 3 to 7 dB is possible when using the special impact button (PP).

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Special oils, mounting inside air cylinders or other special options are available on request.

Adjustable

## MA/ML33 to MA/ML64

### Industrial Shock Absorbers

#### High energy absorption and progressive adjustment

Adjustable and unique: These industrial shock absorbers from ACE, which can be precisely adjusted both at the front and rear, also contribute towards the success of the MAGNUM series. Equipped with excellent sealing technology, an annealed guide bearing and integrated positive stop, they are robust and durable.

These dampers absorb 50 % more energy than their predecessors but are built even more compactly. The larger range of effective loads also opens up various options in design and assembly. This makes the ML series especially suitable for effective loads of 300 kg to 500,000 kg. Where work is done with changing application data and wherever flexibility is required, they make the best option.

These adjustable industrial shock absorbers are used in all areas of mechanical engineering – e.g. in automation, integrated in linear carriages or pivoting units and also for gantries.

#### Technical Data

**Energy capacity:** 170 Nm/Cycle to 6,120 Nm/Cycle

**Impact velocity range:** MA: 0.15 m/s to 5 m/s. ML: 0.02 m/s to 0.46 m/s. Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C

Other temperatures on request.

**Mounting:** In any position

**Positive stop:** Integrated

**Adjustment:** Hard impact at the start of stroke, adjust the ring towards 9 or PLUS. Hard impact at the end of stroke, adjust the ring towards 0 or MINUS.

**Material:** Outer body: Nitride hardened steel; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Return spring: Zinc plated or plastic-coated steel; Accessories: Steel with black oxide finish or nitride hardened

**Damping medium:** Automatic Transmission Fluid (ATF)

**Application field:** Linear slides, Swivel units, Turntables, Portal systems

**Note:** A noise reduction of 3 to 7 dB is possible when using the special impact button (PP). For emergency use only applications and for continuous use (with additional cooling) it is sometimes possible to exceed the published

max. capacity ratings. In this case, please consult ACE.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Special oils, nickel-plated, increased corrosion protection, mounting inside air cylinders or other special options are available on request.

### BV

### Side Load Adaptor

For side load impact angles from 3° to 25°

With side load impact angles of more than 3° the operation lifetime of the shock absorber reduces rapidly due to increased wear of rod bearings. The optional BV side load adaptor provides long lasting solution.

#### Ordering information

- BV3325** (M45x1.5) for MC, MA, ML3325EUM (M33x1.5)
- BV3350** (M45x1.5) for MC, MA, ML3350EUM (M33x1.5)
- BV4525** (M64x2) for MC, MA, ML4525EUM (M45x1.5)
- BV4550** (M64x2) for MC, MA, ML4550EUM (M45x1.5)
- BV6425** (M90x2) for ML6425EUM (M64x2)
- BV6450** (M90x2) for MC, MA, ML6450EUM (M64x2)

#### Material

Threaded body and plunger: Hardened high tensile steel, hardened 610 HV1

#### Mounting information

Directly mount the shock absorber/side mount assembly on the outside thread of the side load adaptor or by using the QF flange. You cannot use a foot mount.

Calculation example and installation hints see page 45.

### PB

### Steel Shroud

For thread sizes M33x1.5, M45x1.5 and M64x2 with 25 or 50 mm stroke.

Grinding beads, sand, welding splatter, paints and adhesives etc. can adhere to the piston rod. They then damage the rod seals and the shock absorber quickly fails. In many cases the installation of the optional steel shroud can provide worthwhile protection and increase lifetime.

#### Material

Hardened high tensile steel

#### Mounting information

To mount the PB steel shroud it is necessary to remove the rod end button of the shock absorber.

#### Safety instructions

When installing don't forget to allow operating space for the shroud to move as the shock absorber is cycled.

### AS

### Switch Stop Collar

For thread sizes M33x1.5 and M45x1.5

The ACE stop light switch stop collar combination serves as a safety element to provide stroke position information for automatically sequenced machines. The compact construction allows its use in nearly any application. The standard rod button is detected by the proximity switch at the end of its stroke to provide switch actuation. The switch is normally open when the shock absorber is extended and only closes when it has completed its operating stroke.

#### Material

Hardened high tensile steel

#### Delivery

The AS switch stop collar combination is only delivered ready mounted onto the shock absorber c/w the switch.

For circuit diagram of proximity switch see page 46.

## Application Examples

### MC33EUM

#### Quicker, gentle positioning

ACE industrial shock absorbers optimize portal for machine loading and increase productivity. This device driven by piston rodless pneumatic cylinders, in which two gripper slides are moving independently of each other at speeds of 2 to 2.5 m/sec., is equipped with industrial shock absorbers as brake systems. Their function is to stop a mass of 25 kg up to 540 times per hour. The model MC3350EUM-1-S was chosen for this application, allowing easy and extremely accurate adjustment of the end positions of the adjustable limit stops. In comparison to brake systems with other function principles, shock absorbers allow higher travel speeds and shorter cycle sequences.

Industrial shock absorbers optimize portal operation

### MC45EUM

#### MAGNUM protection of carriage construction

Serving a similar purpose, several ACE dampers are installed in Jada, the triple-axis, free-moving badminton robot. In order for the badminton robot to be capable of playing, it must be able to change direction in the shortest time possible. Jada is designed therefore to brake at a maximum of 30 m/s<sup>2</sup>. For this task, linear modules are limited by the use of industrial shock absorbers of the type MC4575EUM-0. Miniature shock absorbers and profile dampers are also installed at the location of the "racket hand". In all cases, the modern ACE machine elements serve to protect the end positions of the construction.

A variety of different dampers are used to slow the rapid movements of a badminton robot  
FMTC vzw, 3001 Leuven, Belgium

**MC64EUM-VA**

## MAGNUM Damper for Safety under Water

A pipeline from the rig to the well head that is as flexible as possible is considered to be a quick-disconnect connection in an emergency. Nevertheless, this connection made at the oil source on the sea floor is an Achilles heel. If the connection snaps or if it cannot be separated quickly enough during hazards such as storms, unpredictable, often serious consequences can hardly be prevented. With the so-called XR connector, the safety at this critical point is significantly increased. In the innovative design 10 industrial shock absorbers per connection from the MAGNUM series from ACE in Langenfeld master this important task.

MAGNUMS allow for emergency quick disconnection of the pipelines from the oil rigs  
Subsea Technologies Ltd, Aberdeen, AB12 3AY, UK

**MA/ML33EUM**

## Safe swiveling

ACE industrial shock absorbers offer safety to spare for swiveling or braking of large telescope. The optical system of this telescope for special observations is moveable in two space coordinates. The structure in which the telescope is mounted weighs 15,000 kg and consists of a turntable with drives and two wheel disks rotating on bearings. It enables a rotation by  $\pm 90^\circ$  from horizon to horizon. To safeguard the telescope in case of overshooting the respective swiveling limits, industrial shock absorbers of the type ML3325EUM are used as braking elements. Should the telescope inadvertently overshoot the permissible swivel range, they will safely damp the travel of the valuable telescope.

Perfect overshoot protection for precision telescope

# Heavy Industrial Shock Absorbers

## Effective shock absorption for heavy loads

The heavy industrial shock absorbers from ACE round off the top of the company's offers in damping technology. Designers also have the choice between self-compensating and adjustable machine elements in this category from ACE.

Whichever design is chosen, this type of shock absorber impresses with its robustness and operational readiness wherever heavy loads need reliably stopped on-the-spot at a precise point.

The CA4 models can absorb up to 126,500 Nm of energy. The series of heavy duty, self-compensating CA types are equally suitable for use as an emergency stop as the adjustable types with the designations A1 to A3. The range of effective loads covered is increased considerably for this purpose.

## Heavy Industrial Shock Absorbers

### CA2 to CA4

Self-Compensating

Maintenance-free and ready-to-install

Special versions available

## CA2 to CA4

### Heavy Industrial Shock Absorbers

#### Deceleration of heavy loads

**Powerful:** The mass of these high volume absorbers are between 12.8 and 146 kg in weight. They complement ACE's product range of self-compensating shock absorbers. All models from this series are designed for applications where robustness and a large energy absorption are important.

The absorbers are designed specifically for each customer application with the aid of the ACE calculation program. The risk of crashes and incorrect settings are therefore prevented. The CA models can absorb up to 126,500 Nm of energy and can be used in the area of effective loads between 700 kg and 326,000 kg. The combination of being extremely solid, absorbing high levels of energy and having a large damping range makes them invaluable.

These heavy duty self-compensating industrial shock absorbers are primarily used in heavy mechanical engineering e.g. on lift bridges and steel structures or for damping sluice systems.

#### Technical Data

**Energy capacity:** 3,600 Nm/Cycle to 126,500 Nm/Cycle

**Impact velocity range:** 0.3 m/s to 5 m/s. Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** External positive stops 2.5 mm to 3 mm before the end of stroke provided by the customer.

**Material:** Outer body: Steel corrosion-resistant coating; Piston rod: Hard chrome plated steel; Rod end button: Hardened

steel and corrosion-resistant coating; Return spring: Zinc plated steel

**Damping medium:** Automatic Transmission Fluid (ATF)

**Application field:** Portal systems, Machines and plants, Conveyor systems, Crane systems

**Note:** For emergency use only applications and for continuous use it is possible to exceed the published max. capacity ratings. In this case, please consult ACE.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution

suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Special oils, nickel-plated, increased corrosion protection or other special options are available on request.

### CA2EU-F Front Flange

### CA2EU-R Rear Flange

### CA2EU-SM Foot Mount

Clevis mounting available on request.

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

Adjustable

## A1½ to A3 Heavy Industrial Shock Absorbers

### Deceleration of heavy loads and progressive adjustment

Strong and adjustable: Also in ACE's range of units are heavy duty industrial shock absorbers, which can be adjusted. The models from the A1½ to 3 range, which weigh between 7.55 and 35.5 kg, are extremely robust, ready-to-install hydraulic machine elements with impressively high energy absorption levels and a wide range of damping rates.

Their special aspect is the flexibility, as all the absorbers can be adjusted using a socket on the absorber base and be perfectly adapted to the required data. The A models cover a range of effective loads from 195 to 204,000 kg and can absorb up to 44,000 Nm energy.

These heavy duty, adjustable ACE industrial shock absorbers are the first choice in heavy duty applications and generally in heavy mechanical engineering when the usage data has not been exactly determined.

### Technical Data

**Energy capacity:** 2,350 Nm/Cycle to 44,000 Nm/Cycle

**Impact velocity range:** 0.1 m/s to 5 m/s. Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** External positive stops 2.5 mm to 3 mm before the end of stroke provided by the customer.

**Adjustment:** Hard impact at the start of stroke, adjust the ring towards 9. Hard impact at the end of stroke, adjust the ring towards 0.

**Material:** Outer body: Steel corrosion-resistant coating; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Return spring: Zinc plated steel

**Damping medium:** Automatic Transmission Fluid (ATF)

**Application field:** Portal systems, Machines and plants, Conveyor systems, Crane systems

**Note:** For emergency use only applications and for continuous use it is possible to exceed the published max. capacity ratings. In this case, please consult ACE.

**Safety instructions:** External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions. Do not paint the shock absorbers due to heat emission.

**On request:** Special oils, nickel-plated, increased corrosion protection or other special options are available on request.

## Air/Oil Tanks

### for industrial shock absorbers

**For high cycle rates and extreme temperatures with limited mounting space**

**Shock absorbers convert the introduced energy into heat. The more frequently a shock absorber is stressed per hour, the hotter the oil volume becomes over time. If the requirements placed on the impact frequency of a shock absorber are especially high the use of an air-oil tank is just the right thing.**

Thanks to the increased oil volume and the resulting heat dissipation, the upper limit of the possible hourly energy capacity of the shock absorber increases significantly.

Another characteristic of the air-oil tank is the opportunity for controlled piston return if no permanent return force through an integrated spring in the shock absorber is desired.

### Air/Oil Tanks AO

#### A01

Oil capacity 20 cm<sup>3</sup>

Material: Aluminium caps

Detail drawings on request

#### A03

Oil capacity 370 cm<sup>3</sup>

Material: Steel

#### A06

Oil capacity 2,600 cm<sup>3</sup>

Material: Steel

### Technical Data

**Operating pressure:** Max. 8 bar

**Operating temperature range:** 80 °C

**Damping medium:** ATF-Oil 42 cSt at 40 °C  
Mount air/oil tank higher than shock absorber.  
Bleed all air from system before operating.

**Safety instructions:** Exhaust tank before carrying out service. Check valve holds pressure!

**Suggested air/oil tanks in accordance with W<sub>4</sub> ratings**

#### Connection Examples

Piston rod returns immediately to extended position when load moves away. Operation without main air supply possible for short periods.

Return stroke may be sequenced by pneumatic valve at any desired time. No return force until valve energised.

Return force can be adjusted by pressure regulator. Ensure safe minimum pressure to return shock absorber.

Spring return with air/oil tank. No air supply connected. Note: Will extend return time.

Oil recirculation circuit for extreme high cycle rates. Warm oil is positively circulated through air/oil tank for increased heat dissipation.

Oil recirculation circuit for extreme high cycle rates. Warm oil is positively circulated through air/oil tank for increased heat dissipation.

# Profile Dampers

## The low cost alternative for continuous duty

The exceedingly successful TUBUS series from ACE is a perfect alternative, when masses don't need to be decelerated to an exact point. Available in more than 140 different versions, the profile dampers are used to slow down masses, particularly under extreme conditions.

They are also recommended for use if there is little installation space available. Manufactured in co-polyester elastomer, the highly resistant absorbers provide the best benefits in areas where other materials fail or where a similarly high service life of up to 1 million load changes cannot be achieved. They are affordable, compact and light and absorb the energy with different damping characteristics depending on the design.

Very good price/performance ratio

Reliable in extreme situations

Highly resistant material

Compact and lightweight design

Easy to mount

Long service life

## Physical Properties of TUBUS Profile Dampers

**ACE TUBUS profile dampers** are high performance damping elements made from a special Co-Polyester Elastomer. They have a high energy absorbing capacity compared with other materials.

The excellent damping characteristics are achieved as a result of the special elastomer material and the worldwide patented construction design. This enables us to change the characteristics of the elastomer material so that individual and distinct damping curves are possible.

TUBUS dampers offer a considerable performance advantage when compared to other materials such as rubber, urethanes (PUR) and steel springs.

**A further advantage compared to other damping elements is the operating life expectancy – up to twenty times longer than with urethane dampers, up to ten times longer than with rubber dampers and up to five times longer than with steel spring dampers.**

## Comparison of Damping Characteristics

The innovative TUBUS dampers absorb energy while exhibiting the following damping characteristics:

### Product family TA

Degressive characteristic with max. energy absorption with min. stroke.  
Energy absorption: 58 % to 73 %

### Product family TS

Almost linear characteristic with low reaction force over a short operating stroke.  
Energy absorption: 35 % to 64 %

### Product family TR/TR-L/TR-H

Progressive characteristic with gradually increasing reaction force over a long stroke.  
Energy absorption TR: 25 % to 45 %  
Energy absorption TR-L: 39 % to 62 %  
Energy absorption TR-H: 26 % to 41 %

Characteristics of dynamic energy absorption for impact velocity over 0.5 m/s.

or impact velocities under 0.5 m/s, please request a static characteristic curve.

# TUBUS TA

## Profile Dampers

### Compact size and strong force absorption

Very efficient energy guzzlers: The TA profile dampers from the ACE TUBUS-Series are maintenance-free and ready to install. They consist of co-polyester elastomer; a material that only heats up slightly and ensures consistent damping. The TA models absorb a lot of energy at the start of the stroke.

The TA family has been specially developed for maximum energy absorption within a range of 2 Nm to 2,951 Nm. The minimum height is thanks to the space-saving shape with  $\varnothing$  12 mm to  $\varnothing$  116 mm. The dampers can be very easily and quickly fixed with the provided special screw.

These compact, cost-effective machine elements are ideal as end position dampers in linear axes, in toolmaking and tool machines, in hydraulic and pneumatic equipment, handling equipment and other applications.

### Technical Data

**Energy capacity:** 2 Nm/Cycle to 2,951 Nm/Cycle

**Energy absorption:** 58 % to 73 %

**Dynamic force range:** 870 N to 90,000 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 12 mm to 116 mm

**Mounting:** In any position

**Material hardness rating:** Shore 55D

**Material:** Profile body: Co-Polyester Elastomer

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV

and ozone resistance. Material does not absorb water or swell.

**Impact velocity range:** Max. 5 m/s

**Torque max.:**

M3: 1 Nm

M4: 1.7 Nm

M5: 2.3 Nm

M6: 6 Nm

M8: 20 Nm

M12: 50 Nm

M16: 120 Nm

**Application field:** Linear slides, Pneumatic cylinders, Handling modules, Machines and plants

**Note:** Suitable for emergency stop applications and for continuous use. For applications with preloading and increased temperatures please consult ACE.

**Safety instructions:** Mounting screw should additionally be secured with Loctite.

**On request:** Special strokes, -characteristics, -spring rates, -sizes and -materials.

### TA

### Characteristics

**Type TA37-16**  
**Energy-Stroke Characteristic (dynamic)**  
 (with impact velocity over 0.5 m/s)

**Type TA37-16**  
**Force-Stroke Characteristic (dynamic)**  
 (with impact velocity over 0.5 m/s)

With the aid of the characteristic curves above you can estimate the proportion of the total energy that will be absorbed.  
 Example: With impact energy of 50 Nm the Energy-Stroke diagram shows that a stroke of about 8.8 mm is needed.  
 On the Force-Stroke diagram you can estimate the proportion of absorbed energy to rebound energy at this stroke length.  
**Dynamic ( $v > 0.5$  m/s) and static ( $v \leq 0.5$  m/s) characteristics of all types are available on request.**

**The calculation and selection of the most suitable damper should be carried out or be approved by ACE.**

<sup>1</sup> Max. energy capacity per cycle for continuous use.

# TUBUS TS

## Profile Dampers

### Compact size and smooth deceleration

Energy absorption in a compact and uniform way: The TS (TUBUS soft) profile dampers are also manufactured from co-polyester elastomer. Due to the almost linear damping characteristic curve, the maintenance-free, ready-to-install components softly absorb the energy with minimum strain on the machine. Consistent damping is helped by the low temperature increase of the material during operation.

The TS-Series impresses with maximum energy absorption within a range of 2 Nm to 966 Nm within a minimum height. The space-saving design has been implemented from  $\varnothing$  14 mm to  $\varnothing$  107 mm. The special screw supplied is used to simply and quickly fix the profile dampers in place.

Suitable for emergency stop and permanent applications, the cost-effective, durable TUBUS TS can be used as end position dampers in linear axes, in toolmaking and tool machines and in hydraulic, pneumatic and handling equipment.

### Technical Data

**Energy capacity:** 2 Nm/Cycle to 966 Nm/Cycle

**Energy absorption:** 35 % to 64 %

**Dynamic force range:** 533 N to 23,500 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 14 mm to 107 mm

**Mounting:** In any position

**Material hardness rating:** Shore 40D

**Material:** Profile body: Co-Polyester Elastomer

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV

and ozone resistance. Material does not absorb water or swell.

# TUBUS TR

## Profile Dampers

### Compact size and soft deceleration

For long, soft braking action: The Radial damping forces in this model from the ACE TUBUS-Series provides the TR range. These maintenance-free, ready-to-install elements are made of co-polyester elastomer, which only heats up slightly during operation and therefore provides consistent damping.

The radial loading enables a very long and soft deceleration with progressive energy reduction at the end of the stroke. The TR-Series has been specially designed for maximum stroke with a minimum height, producing an energy absorption per stroke extending from 1.2 Nm to 146 Nm. The dampers are available in compact formats of Ø 29 mm to Ø 100 mm and are supplied with a special screw for simple, quick assembly.

The TUBUS TR products are suitable as end position dampers in linear axes, in toolmaking and tool machines, in hydraulic and pneumatic equipment, handling equipment and other applications.

### Technical Data

**Energy capacity:** 1.2 Nm/Cycle to 146 Nm/Cycle

**Energy absorption:** 25 % to 45 %

**Dynamic force range:** 218 N to 7,500 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 29 mm to 100 mm

**Mounting:** In any position

**Material hardness rating:** Shore 40D

**Material:** Profile body: Co-Polyester Elastomer

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV

and ozone resistance. Material does not absorb water or swell.

**Impact velocity range:** Max. 5 m/s

**Torque max.:**

M5: 3 Nm

M6: 6 Nm

M8: 20 Nm

**Application field:** Furniture industry, Sports equipment, Linear slides, Pneumatic cylinders

**Note:** Suitable for emergency stop applications and for continuous use. For applications with preloading and increased temperatures please consult ACE.

**Safety instructions:** Mounting screw should additionally be secured with Loctite.

**On request:** Special strokes, -characteristics, -spring rates, -sizes and -materials.

TR

### Characteristics

#### Type TR93-57

**Energy-Stroke Characteristic (dynamic)**  
(with impact velocity over 0.5 m/s)

#### Type TR93-57

**Force-Stroke Characteristic (dynamic)**  
(with impact velocity over 0.5 m/s)

With the aid of the characteristic curves above you can estimate the proportion of the total energy that will be absorbed.  
Example: With impact energy of 50 Nm the Energy-Stroke diagram shows that a stroke of about 31 mm is needed.  
On the Force-Stroke diagram you can estimate the proportion of absorbed energy to rebound energy at this stroke length.  
**Dynamic ( $v > 0.5$  m/s) and static ( $v \leq 0.5$  m/s) characteristics of all types are available on request.**

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

# TUBUS TR-H

## Profile Dampers

**Compact size with soft deceleration and high energy absorption**

Harder mixture of materials for higher energy absorption: The maintenance-free and ready-to-install TR-H-Series profile dampers, are stressed radially in the same way as the basic TR model. With almost the same dimensions, they also decelerate with a very long and soft action. The harder co-polyester elastomer mixture leads to significantly high energy absorption of 2.7 Nm to 427 Nm in these models. Easy to mount due to the supplied special screw.

The TR-H-Series is space-saving with dimensions of  $\varnothing$  30 mm to  $\varnothing$  102 mm. It complements the TUBUS range between the progressive TR and almost linear TS models. Users are therefore provided with a full range of deceleration curves within the ACE TUBUS family.

The TUBUS TR-H products are suitable end position dampers in linear axes, in toolmaking and tool machines and in hydraulic, pneumatic and handling equipment as well as other applications.

### Technical Data

**Energy capacity:** 2.7 Nm/Cycle to 427 Nm/Cycle

**Energy absorption:** 39 % to 62 %

**Dynamic force range:** 550 N to 21,200 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 30 mm to 102 mm

**Mounting:** In any position

**Material hardness rating:** Shore 55D

**Material:** Profile body: Co-Polyester Elastomer

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV

and ozone resistance. Material does not absorb water or swell.

**Impact velocity range:** Max. 5 m/s

**Torque max.:**

M5: 3 Nm

M6: 6 Nm

M8: 20 Nm

**Application field:** Furniture industry, Sports equipment, Linear slides, Pneumatic cylinders

**Note:** Suitable for emergency stop applications and for continuous use. For applications with preloading and increased temperatures please consult ACE.

**Safety instructions:** Mounting screw should additionally be secured with Loctite.

**On request:** Special strokes, -characteristics, -spring rates, -sizes and -materials.

### TR-H

### Characteristics

**Type TR95-50H**  
**Energy-Stroke Characteristic (dynamic)**  
**(with impact velocity over 0.5 m/s)**

**Type TR95-50H**  
**Force-Stroke Characteristic (dynamic)**  
**(with impact velocity over 0.5 m/s)**

With the aid of the characteristic curves above you can estimate the proportion of the total energy that will be absorbed.  
 Example: With impact energy of 50 Nm the Energy-Stroke diagram shows that a stroke of about 25 mm is needed.  
 On the Force-Stroke diagram you can estimate the proportion of absorbed energy to rebound energy at this stroke length.  
**Dynamic ( $v > 0.5$  m/s) and static ( $v \leq 0.5$  m/s) characteristics of all types are available on request.**

**The calculation and selection of the most suitable damper should be carried out or be approved by ACE.**

# TUBUS TR-L

## Profile Dampers

### Powerhouse in long body length

Especially for applications with long and soft deceleration: The radial tube dampers TR-L from the ACE TUBUS-Series are maintenance-free, ready-to-install elements made of co-polyester elastomer.

Their radial load offers designers a very long and soft deceleration with a progressive reduction in energy at the end of the stroke. The TR-L-Series has been specially developed for a maximum stroke with a minimum height and a range of 7.2 Nm to 10,780 Nm. The absorption capacity is dependent on the length of the selected tube damper. These models are available in sizes between Ø 29 mm and Ø 188 mm.

The TUBUS TR-L is used where impact or collision protection is necessary along a straight line e.g. on shovels in mining equipment, loading and lifting devices, dock systems in shipbuilding or luggage and transport belts.

### Technical Data

**Energy capacity:** 7.2 Nm/Cycle to 10,780 Nm/Cycle

**Energy absorption:** 26 % to 41 %

**Dynamic force range:** 1,312 N to 217,700 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 29 mm to 188 mm

**Mounting:** In any position

**Material hardness rating:** Shore 55D

**Material:** Profile body: Co-Polyester Elastomer

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV

and ozone resistance. Material does not absorb water or swell.

**Impact velocity range:** Max. 5 m/s

**Torque max.:**

M5: 3 Nm

M8: 20 Nm

M16: 40 Nm (DIN912)

M16: 120 Nm (shouldered screw)

**Application field:** Offshore industry, Agricultural machinery, Impact panels, Conveyor systems

**Note:** Suitable for emergency stop applications and for continuous use. For applications

with preloading and increased temperatures please consult ACE.

**Safety instructions:** Mounting screw should additionally be secured with Loctite.

**On request:** Special strokes, -characteristics, -spring rates, -sizes and -materials.

# TUBUS TR-HD

## Profile Dampers

### Compact powerhouse in solid material

**Impact and collision protection:** The TR-HD profile dampers are stressed in the same way as the basic model TR but offer a higher force and energy absorption with a shorter damping distance thanks to the solid design. Different damping characteristic curves can be achieved with two different co-polyester elastomer hardness levels. The slightly oval (bi-concave) shape also ensures a softer force intake.

This series absorbs a lot of energy despite the low height: a range of 405 Nm to 11,840 Nm is progressively covered by strokes of 12 mm to 44 mm. With two screws, included in the delivery, the damper can be easily and quickly fixed both horizontally or vertically. The drill hole distance is adapted if required.

These dampers are used in agricultural technology and on shovels or break joints on construction machines as well as on loading and lifting or similar equipment.

### Technical Data

**Energy capacity:** 405 Nm/Cycle to 11,840 Nm/Cycle

**Energy absorption:** 43 % to 72 %

**Dynamic force range:** 78.800 N to 812,900 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 42 mm to 117 mm

**Mounting:** In any position

**Material hardness rating:** Shore 40D, Shore 55D

**Material:** Profile body: Co-Polyester Elastomer

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV and ozone resistance. Material does not absorb water or swell.

**Impact velocity range:** Max. 5 m/s

**Torque max.:**

M10: 7 Nm

M12: 12 Nm

**Application field:** Offshore industry, Agricultural machinery, Impact panels, Conveyor systems

**Note:** Suitable for emergency stop applications and for continuous use. For applications

with preloading and increased temperatures please consult ACE.

**Safety instructions:** Mounting screw should additionally be secured with Loctite.

**On request:** Special strokes, -characteristics, -spring rates, -sizes and -materials.

## Application Examples

TA

### Safe end position damping

ACE TUBUS profile dampers protect the integrated loading station on a new high speed machining centre. The ACE TUBUS damper is designed to prevent overrun on the high speed loading station of a Camshaft machining centre used in the automobile industry. In the event that the drive train fails during operation or incorrect data is inputted the ACE TUBUS damper absorbs the impact preventing costly damage to the machine. The TA98-40 TUBUS damper impressed engineers with this exceptionally long service life in operation. When used as an emergency stop the TUBUS damper can absorb up to 73 % of the impact energy.

Safety with ultra high speed operation

TS

### Safe braking of maintenance boats

The maintenance of wind turbines in open seas has long resulted in damage to maintenance boats. Because of impact velocity and swell, an increase in the boat's mass of up to 20 percent must be taken into account when landing on a rigid mooring structure. It is only since the landing operation has been carried out with the aid of the ACE company's TUBUS series that cable repair and maintenance work on wind turbines has been made safe for both personnel and equipment. TUBUS of the type TS84-43 are seawater resistant and can withstand ambient temperatures from  $-40\text{ }^{\circ}\text{C}$  to  $+90\text{ }^{\circ}\text{C}$ .

Seawater-resistant, robust TUBUS profile dampers made of co-polyester elastomer allow boats and crew to dock safely  
Wals Diving and Marine Service, 1970AC IJmuiden, Netherlands

## Protection of drive used in space treadmill

When training in zero gravity, a harness with bungee cords is used to ensure that trainees do not become disengaged. Three ACE profile dampers with a linear-working facility are utilized in this case. One so-called TUBUS is positioned in the pneumatic cylinder, while the other two are put in place in the rest of the system. All the dampers have the task of protecting the system if the treadmill drive belts become damaged. Otherwise, the cylinder would reach a very high speed and become seriously damaged at the end of the stroke.

TUBUS are used to protect a fitness machine in zero gravity  
QinetiQ Space nv, BE9150 Kruikebe, Belgium

**TR**

## Gentle damping for electric scooters

TUBUS profile dampers make driving an e-scooter a real experience. The footboard of an electric scooter should be dampened to enable the driver to experience a comfortable ride even over potholes and other bumpy surfaces. Ideally, the characteristic line should be furnished with a soft increase in force over a long stroke. The elegant look of the scooter as well as the folding mechanism designed to save space have not allowed the use of feasible damper solutions up to now. Inferior alternatives such as rubber dampers made of polyurethane or simple steel springs could not be considered from the start. The TUBUS profile damper TR52-32H offered the perfect solution with its compact construction design paired with progressive damping action.

Profile dampers increase the riding comfort of an electric scooter

# Special Profile Dampers

## Costs-effective tuning for your pressing tools

**ACE provides TUBUS profile dampers in many variations. Special solutions for presses can now be cost-effectively achieved with down holder dampers, damping plugs, lift dampers and press dampers from ACE.**

They replace the PU-springs previously used in the automotive industry. It was no longer possible for them to fulfil the required tasks due to the higher return stroke speeds in modern pressing tools. Made of co-polyester elastomers, the TUBUS special takes care of the protection of mounting bolts and insert bolts much more reliably. On the one hand they protect a so-called down holders during the return stroke after the forming of sheet metal parts, and on the other they function as protection for hoisting lifters.

High reliability

Long service life

High power and energy absorption

Efficient working through higher cycle rates

Extreme abrasion hardness and shear strength

Noise reduction

## TUBUS Special Profile Dampers

### A wide range of solutions for your tools

Small but effective: These versatile, custom-manufactured components make all the difference during sheet metal forming in the automotive and tool industries thanks to long service lives and high power absorption.

#### TUBUS Down Holder Dampers

##### The innovation as a substitute for overburdened PU springs

The axial-functioning elements are ideal for different diameters of mounting bolts from M10 to M30 in the press tools. They increase clock rates, service lives and reliability during increased cushioning strokes there.

#### TUBUS Lift Dampers

##### The brother of the down holder damper

Used in the end position damping in ProgDie presses, they sit on the mounting bolts of the spring-loaded belt guide rails or hoisting lifters in the bottom part of the tool of the follow-on composite tool, protect it and accelerate production.

#### TUBUS Damping Plugs

##### A special kind of emergency plug

These side-mounted, radial damping elements also protect the mounting bolts and insert bolts during the opening of the pressing tools. They are available in four different sizes and are used in large tools.

#### TUBUS Press Dampers

##### When a side effect (nearly) becomes the main thing

All TUBUS specials additionally reduce noise. In press dampers, used particularly in eccentric presses by manufacturers of large household appliances, this is however the main task. Screwed into a hole pocket, they also effectively protect the tools.

More information about TUBUS special profile dampers can be found in our special catalogue and on our website

# Damping Pads

## Customised damping technology

**With damping pads from the SLAB series, ACE provides solutions to effectively slow down impact loads over large and small surfaces. This means that these products are found in a wide range of damping technologies from ACE where oscillation begins or where damaging impacts in construction designs need to be slowed over a large surface.**

The ACE SLAB pads, available to choose in any size, absorb static loads from 3 to 30 N/cm<sup>2</sup> and can be either cut to size two-dimensionally according to each requirement or designed as a moulded part. It is simply adhered to assemble. The standard plate heights are between 12.5 and 25 mm. Many different coatings clear the way for numerous applications and not least because they can be used in a temperature range from -5 °C to +50 °C.

## Individual Pad Cutting

### SLAB pads pre-assembled for each project

Whether pads, cuts or drawing parts, stocked SLAB pads in combination with our freely programmable cutting machine ensure maximum flexibility with excellent delivery speed.

**Fast, flexible and adapted to your conditions.**

*Ask for special solutions !!!*

Can be integrated quickly and cost-effectively

Immense inner damping

Pad thicknesses up to 80 mm on request

Can be assembled with CNC cutting machines

Patented formula

Environmentally-friendly H<sub>2</sub>O-foamed

# SLAB-030 to SLAB-300

## Damping Pads

### Energy absorption in pad format

Tailor made damping material in pad format: SLAB damping pads are made of a viscoelastic PUR-material. They absorb impact loads extremely effectively and are also suitable for insulating or damping vibration.

The pad series SL-030 to 300 are quickly adapted to the relevant type of application. This is in part achieved through the configuration of the calculating tool or directly by the ACE specialist engineers. Furthermore, this is possible because the standard material can be cut exactly and quickly to any customer requirement with our new cutting system. It is also possible to obtain a sample to find an optimum solution.

The SLAB damping pads are proven impact or collision protection. They are used on luggage and transport belts, conveyor systems, pneumatic, electromechanical and hydraulic drives as well as on linear carriages.

### Technical Data

**Energy capacity:** 3.1 Nm/Cycle to 210 Nm/Cycle

**Standard density:**

SL-030 = approx. 170 kg/m<sup>3</sup>

SL-100 = approx. 340 kg/m<sup>3</sup>

SL-300 = approx. 480 kg/m<sup>3</sup>

**Standard colour:** Green

**Dimensions:**

Widths: up to 1,500 mm

Lengths: up to 5,000 mm

Thicknesses: 12.5 mm and 25 mm

**Environment:** Resistant against ozone and UV radiation. Chemical resistancy on request.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Profile body: Mixed cellular PUR-Elastomer (polyurethane)

**Application field:** Linear slides, Handling modules, Luggage and transport belts, Impact panels

**Note:** Possibilities for cutting: Water jet cutting, stamping, splitting, sawing and drilling

**Safety instructions:** Fire rating: Class E, normally flammable, according to DIN 13501-2

**On request:** Special versions with further dimensions such as thicknesses, colours, shapes and drawing parts e.g. curves. Different wear layers.

### SL-030-12

### Characteristics

#### Type SL-030-12

#### Force-Stroke Characteristic (dynamic)

#### Stroke Utilization 6.5 mm

#### Load data

Dynamic load, impact velocity: approx. 1 m/s

The chosen damping plate should be tested by the customer on the specific application.

## Bonding of Polyurethane (PUR) Elastomers

Cellular and compact parts of polyurethane (PUR) elastomers SLAB damping pads can be bonded according to the following recommendations. If treatment instructions are followed, the strengths of the bonded joint can be equivalent to the elastomer material itself.

### 1. General Information

To achieve the required bonding strength it is necessary to ensure the correct adhesive is chosen for each individual application.

#### Contact bonding material

Thin adhesive film, with little filling of the gaps. Correcting or moving of the areas covered with bonding material is no longer possible after the first contact is made (contact effect).

Once a bonding is separated, the bonding process must be renewed.

Please note that creases, ripples or blisters cannot be straightened once the contact is made.

#### Hardening bonding material

(As thin as possible) the film of glue fills the joint. The gluing can be done after the edges are brought together.

### 2. Preparation

The preparation of bonding surfaces is of significant importance for the bonding strength. The surfaces must be adapted to each other and available in plain, clean form.

#### Careful removal of

Adhesive remnants, oil, fat, separating agents, dirt, dust, scales, molding layers, protective coating, finish, paint, sweat etc.

#### Mechanical support

Stripping, brushing, scraping, grinding, sandblasting.

#### Chemical support

Degreasing (washing off with grease remover), etching, priming; pay attention to chemical resistancy on the following page!

In general, SLAB damping pads in sheet form can be bonded without pretreatment. Molded parts, with or without special skin, have to be cleaned from left-over separating agents, if necessary by grinding. When bonding with other materials like plastic, wood, metal or concrete, mechanical and/or chemical additives have to be used.

The adhesive has to be prepared according to the formula, observing the manufacturer's recommendations. The adhesive film is also to be carefully applied pursuant to these details. (Tools: brush, spatula, adhesive spreader, airless spray gun).

#### Contact bonding material

Apply the non-gap-filling adhesive film to both bonding surfaces – the thinner, the better. To close the pores of low density materials, two layers may be necessary.

#### Hardening bonding material

Apply evenly. Possible irregularities can be compensated by the film thickness.

### 3. Bonding

When using contact bonding material, the flash off time has to be kept in mind. Especially, with systems containing water instead of usual solvents, the adhesive film must be as dry as possible in order to pass the 'finger test' – no marks appear when touching the adhesive surface. When using hardening bonding material, the parts have to be joined immediately after applying the bonding material.

### 4. Pressing

**Contact bonding material**      Contact pressure up to 0.5 N/mm<sup>2</sup>  
**Hardening bonding material**      Fix firmly

It is important to carefully follow the manufacturer's instructions with regard to processing temperature, hardening time and earliest possible loading.

### 5. Selection of Approved Bonding Materials

Because of the variety of materials that can be bonded together as well as numerous suitable bonding materials, we refer you to a worldwide leading producer of bonding and sealing materials.

## Chemical Resistance

### Test (following DIN 53428)

Exposure time of the medium: 6 weeks at room temperature, but for concentrated acids and bases as well as solvents: 7 days at room temperature

### Evaluation Criteria

Changing of tensile strength and elongation of break (dry samples), change in volume

### Evaluation Standard

<b>1 Excellent resistance</b>	change in characteristics <10 %
<b>2 Good resistance</b>	change in characteristics between 10 % and 20 %
<b>3 Conditional resistance</b>	change in characteristics partly above 20 %
<b>4 Not resistant</b>	change in characteristics all above 20 %

All information is based on our current knowledge and experiences. We reserve the rights for changes towards product refinement.

## Application Examples

SL-030, TA

### Damping combination SLAB and TUBUS

SLAB-TUBUS-Combination ensures fast luggage transport. Airports endeavour to shorten air passengers' waiting times as much as possible. This aim is met with a solution especially developed for luggage transport systems and has solved previous damping issue. Transport carriers with a weight of up to 120 kg can now be moved at the desired conveyor belt speeds. A SLAB-combination of the material SL-030-12(25)-Dxxxx together with two TA40-16 type TUBUS profile dampers are used here.

Fast luggage transport for airport customers

SL-030

### Noise reduction

ACE-SLAB damping pads protect man and machine. At the beginning of the construction phase of a modern processing centre at the end position, a 25 kg cable channel collided with force against the housing and produced a deafening noise and mechanical strain on the energy chain. A reliable solution for compliance with the operational parameters was realized with the SL-030-25-Dxxxx type ACE-SLAB damping pads even before the milling machine was finished.

Low-noise energy chain

**SL-030**

**Impact reduction in ring form**

ACE-SLAB damping pads make tyre transport safer. Developed for absorbing the impact of forces, the ACE-SLAB damping pads SL-030-121-Dxxxx applied in this tyre testing system are ideal for protecting the sliding parts of the machine during quality tests. The individual customisation of the ring form of the centre arm and simple integration into the equipment also support the decision for applying these innovative absorber elements.

Perfectly fitted machine protection  
SDS Systemtechnik GmbH, 75365 Calw, Germany

**SL-030**

**Impact protection for large areas**

ACE-SLAB damping pads offer impact protection for wooden battens. To protect wooden battens with differing weights and impact speeds of approx. 2 m/s, the SLAB-material SL-030-12-Dxxxx was screwed across the whole surface between two steel sheets in this application. This creates an even damping effect over the whole impact area, which protects the impact surfaces of the battens from an excessive impact load. The minimisation of recoil as well as reduction of noise are further positive side effects of this construction.

Impact protection for wooden battens

Issue 08.2016 – Specifications subject to change

# Motion Control

**Hydraulic Dampers, Hydraulic Feed Controls  
Rotary Dampers**

(Extract from Main Catalogue)

# Perfect Support for Muscle Power

## Customised to suit your applications

**The various products from ACE in this segment give a new quality to any type of movement. Anyone who wants to raise or lower loads, regulate the feed of an object to the precise millimetre or gently decelerate rotating or linear movements will find the right helper here.**

ACE also convinces with industry quality in this area. And the innovative solutions also correspond with the maximum requirements of ergonomics and individuality, including with customised, fillable gas springs.

# Hydraulic Dampers

## Multi-talent in speed control

**The hydraulic dampers DVC work with individual speed adjusters for the push and pull direction. This provide users with the maximum flexibility.**

Whether used as drive compensation or safety elements, the retraction and extension speed of these ACE solutions can always be precisely set. This means that the speed of movement can be controlled, synchronisation regulated in both directions and pivoting loads can be compensated. Depending on the model, the push and pull forces are between 42 and 2,000 N. These maintenance-free, ready-to-install products are available in stroke lengths up to 150 mm.

## Hydraulic Dampers

### DVC-32

Adjustable, Without Free Travel

**Individual speed adjustment in both directions**

Cylinder speed controls, Absorption control, Finishing and processing centres

Page 130

Constant speed rates

Sensitive adjustment

High quality and long lifetime

Easy to mount

## Application Example

### DVC-32

#### Precise unreeling

Hydraulic dampers bring the sled movement of this textile machine to a gentle stop. At the turning point of 130 kg reeling spools, a sled should move up and down smoothly without causing a collision at the end of stroke position. The solution was provided by the hydraulic damper DVC-32-100EU. A self-contained sealed unit, ready to install and maintenance-free these units are ideal for precise control of speeds in both directions of travel. The travel speed is maintained throughout the entire stroke and can be independently adjusted in each direction of travel. Thanks to their compact design and wide choice of mounting accessories, these dampers could be easily integrated into this machine.

Textile machine unreels threads even better

Adjustable, Without Free Travel

## DVC-32

### Hydraulic Dampers

#### Individual speed adjustment in both directions

Can be regulated separately in any stroke position: The hydraulic dampers in the DVC-32 model are the first model to have the ability to have the in and out speeds adjusted independently from the outside and therefore more precisely. With their individual adjustment segments for the push and pull direction as well as the double-sided action, these are suitable as safety or control elements.

The great number of mounting accessories makes assembly of these hydraulic dampers by ACE easier and allows these maintenance-free, ready-to-install and self-contained systems universally applicable. Qualitatively high grade, and at the same time simple to use; one of their uses is to absorb swinging loads.

These machine elements are used, for one, in the automotive sector and industrial applications as well as in mechanical engineering and the electronics industry.

#### Technical Data

**Compression and extension force:**

42 N to 2,000 N

**Outer body diameter:** Ø 32 mm**Piston rod diameter:** Ø 8 mm**Lifetime:** Approx. 10,000 m**Operating temperature range:** 0 °C to 65 °C**Adjustment:** Steplessly adjustable**Positive stop:** External positive stops 1 mm to 1.5 mm before the end of stroke provided by the customer.**Damping medium:** Automatic Transmission Fluid (ATF)**Material:** Outer body: Coated aluminium; Piston rod: Black anodized aluminium; End fittings: Zinc plated steel**Mounting:** In any position**Application field:** Cylinder speed controls, Absorption control, Finishing and processing centres**Note:** Increased break-away force if unit has not moved for some time. Damping force can be adjusted after installation.**End fittings:** They are interchangeable and must be positively secured by the customer to prevent unscrewing.**On request:** Special oils and other special options. Alternative accessories available on request.

## Mounting Accessories

for hydraulic dampers made of steel

By taking advantage of the very extensive range of ACE end fittings and mounting brackets you can easily and simply install our hydraulic dampers. You profit from the variety of DIN Standard end fittings such as swivel eyes, clevis forks and angle ball joints.

ACE also offers eye fittings made of wear-resistant steel to meet the higher specification requirements found in industrial applications. These mounting accessories provide an extensive range of combinations for optimum installations.

The complete range of accessories are also available as individual components.

# Hydraulic Feed Controls

## Regulate feed rates in the best way

**Hydraulic feed controls from ACE are recommended as the perfect solution e.g. when sawing, cutting, drilling and in order to prevent the stick-slip effect on pneumatic cylinders, amongst others. They can be precisely adjusted and provide speeds from 12 mm/min. with a very low feed force or up to 38 m/min. with a high feed rate.**

The maintenance-free, ready-to-install hydraulic feed controls are self-contained, hydraulic elements regulated by a precision throttle. The feed rate is set from the outside by turning the setting adjuster. The tried-and-tested rolling diaphragms used in many ACE shock absorbers also serve as a dynamic sealing element for a hermetic seal as well as volume compensation for the piston rod and resetting element.

## Hydraulic Feed Controls

## VC25

### Hydraulic Feed Controls

For precision adjustment of feed rates

Precise adjustment for any type of application: The VC model of hydraulic feed controls is ideally suited for the precise tuning of constant feed rates. The thread of the outer body of this closed hydraulic element allows simple assembly. Designs with a smooth body can also be supplied.

As the hydraulic oil is forced out through the throttle opening, a constant feed rate is achieved on the stroke, which also avoids the stick-slip effect. In the models up to 55 mm stroke, the tried and tested rolling diaphragm, known from ACE shock absorbers, serves as a dynamic seal, as volume compensation of the piston rod and as a reset element.

The VC model of precision hydraulic feed controls is used in automotive and industrial applications as well as in automation and machine building and electronics industries.

#### Technical Data

**Compression force:** 30 N to 3,500 N

**Execution:** F = Ø 23.8 mm without thread  
FT = M25x1.5 threaded body

**Piston rod diameter:** Ø 8 mm

**Feed rate/Compression force:** Min.  
0.013 m/min. at 400 N; Max. 38 m/min. at  
3,500 N

**Impact velocity range:** At speeds of 0.3 m/s the maximum allowed energy is approx. 1 Nm for units up to 55 mm stroke and approx. 2 Nm for units 75 mm to 125 mm stroke. Where higher energies occur use a shock absorber for the initial impact. Avoid high impact velocities.

**Adjustment:** Infinitely adjustable

**Positive stop:** External positive stops 1 mm to 1.5 mm before the end of stroke provided by the customer.

**Damping medium:** Oil, temperature stable

**Material:** Outer body: Black anodized aluminium; Piston rod: Hard chrome plated steel; Accessories: Steel with black oxide finish or nitride hardened

**Mounting:** In any position

**Operating temperature range:** 0 °C to 60 °C

**Application field:** Handling modules, Linear slides, Automatic machinery, Conveyor equipment

**Note:** Nylon button PP600 can be fitted onto piston rod. Unit may be mounted in any position.

**Safety instructions:** Do not rotate piston rod, if excessive rotation force is applied rolling seal may rupture. External materials in the surrounding area can attack the seal components and lead to a shorter service life. Please contact ACE for appropriate solution suggestions.

**On request:** Special oil and other special options available on request.

# MA, MVC

## Hydraulic Feed Controls

Designed for applications with low precision requirements

Many application options: The hydraulic feed controls in models MA and MVC are similar to that of the VC model. However, these hydraulic controls have been designed for applications that require less precision.

There are also plenty of accessories for the MA and MVC models. All products are ready-to-install, maintenance-free, stable in temperature and avoids stick-slip effect. Speeds from 12 mm/min. can be driven at a low thrust force using the adjustment screw on the base of the hydraulic control.

Hydraulic feed controls with the designations MA and MVC are especially used in handling modules or linear carriages and also for applications with changing usage data.

Operating Range MVC225 to MVC900

### Performance and Dimensions

TYPES	Stroke mm	Compression Force		Return force min. N	Return force max. N	Return time s	Side Load Angle max. °	Weight kg
		min. N	max. N					
MA30EUM	8	8	80	1.7	5.3	0.3	2.0	0.013
MA50EUM	7.2	40	160	3.0	6.0	0.3	2.0	0.025

MVC900EUM	40	70	3,500	10.0	35.0	0.95	2.0	0.400

<sup>1</sup> For applications with higher side load angles consider using the side load adaptor (BV) pages 38 to 45.

### Technical Data

**Compression force:** 8 N to 3,500 N

**Execution:** Thread M8 to M25

**Impact velocity range:** At speeds of 0.3 m/s the maximum allowed energy is approx. 2 Nm. Where higher energies occur use a shock absorber for the initial impact. Avoid high impact velocities.

**Adjustment:** Hard impact at the start of stroke, turn towards 9 or PLUS. Hard impact at the end of stroke, turn towards 0 or MINUS.

**Positive stop:** Integrated

**Damping medium:** Oil, temperature stable

**Material:** Outer body: Nitride hardened steel; Piston rod: Steel with black oxide finish or nitride hardened

**Mounting:** In any position

**Operating temperature range:** 0 °C to 66 °C

**Application field:** Handling modules, Linear slides, Automatic machinery, Conveyor equipment

**Note:** Damper is preset at delivery in a neutral position between hard and soft.

**Safety instructions:** External materials in the surrounding area can attack the seal compo-

nents and lead to a shorter service life. Please contact ACE for appropriate solution suggestions.

**On request:** Nickel-plated, weartec finish (seawater resistant) or other special options available on request.

# Rotary Dampers

## Small dampers refine end product

**ACE rotary dampers mainly provide an invisible yet valuable service as a maintenance-free machine element to allow controlled deceleration of rotary or linear movements.**

They are often necessary to make careful opening and closing of small lids, compartments and drawers possible and they protect sensitive components while increasing the quality and value of products. They are easy to integrate. The harmoniously gentle movements of these little decelerators can be achieved with continual rotation or with limited pivoting angles. They slow down left, right or double sided rotation. Suitable for almost any application and currently also available in adjustable variations, they provide braking torques of 0.05 Ncm to 40 Nm.

**Partial Rotation Angle, Adjustable**  
e.g. FYT-H1 and FYN-H1

### General Function

Rotary dampers operate on the principle of fluid damping. The damping moment is determined by the viscosity of the fluid and the dimensioning of the throttle gap or throttle orifices.

### Rotary Dampers with Continuous Rotation

Rotate for the plus in quality: For smooth, quiet movements of small hoods, flaps and fans these continuously rotating rotary dampers from ACE decelerate either right, left or two-sided rotation right in the pivot point or linear through a gear and gear rack. The harmoniously gentle process protects components and increases the quality and value of products. The maintenance-free, ready-to-install ACE rotary dampers are filled with an inert fluid, usually silicone oil. The viscosity of the fluid and the sizing of the throttling gap determine the damping torque. The FFD series is the only exception: These fluid-free rotary dampers operate according to the principle of friction.

The continuously rotating rotary dampers with the designations FRT, FRN, FFD, FDT and FDN are used in household and medical devices as well as in the automotive, electronics and furniture industries.

### Rotary Dampers with Partial Rotation Angle

For controlled and gentle deceleration: The damping direction of this rotary damper, which is available with adjustable damping torque, can be right, left or two-sided rotation. They can be installed directly in the pivot point of a construction and achieve uniform, quiet movements, which increases quality and value and protects sensitive components. The products are maintenance-free, ready-to-install and filled with an inert fluid, usually silicone oil. A rotor movement presses the fluid from one chamber into the other. The damping torque is determined by the viscosity of the fluid and the sizing of the throttling gap the throttle holes. During each reversal of movement, depending on the frame size a certain return damping torque develops.

These solutions are used in the automotive sector, in many industrial applications, in the electronics and furniture industries as well as in medical devices.

## FRT-E2 Rotary Dampers

### Small and lightweight for finest braking

The damping direction of the smallest ACE FRT-E2 rotary dampers with plastic body is rotating on both sides. They can brake directly in the pivot point or linear through a gear and gear rack. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 10 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** 0 °C to +50 °C

**Pressure angle:** 20°

**Material:** Outer body, Shaft, Gear: Plastic

**Mounting:** In any position

**Tooth:** Involute gearing

**P.C.D.:** 6 mm

**No. of teeth:** 10

**Module:** 0.6

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request. Toothed plastic racks (modules 0.5 to 1.0) are available for the rotary dampers with pinions.

### Characteristics

#### At 23 °C ambient temperature

#### At 20 rpm rotational speed

<sup>1</sup> The indicated damping torque refers to a rotational speed of 20 rpm and an ambient temperature of 23 °C.

### FRT-G2 Rotary Dampers

#### Small and lightweight for finest braking

The damping direction of the ACE FRT-G2 product family with plastic body is rotating on both sides. The small rotary dampers can brake directly in the pivot point or linear through a gear and gear rack. ACE rotary dampers are maintenance-free and ready-to-install.

#### Technical Data

**Construction size:** Ø 15 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** 0 °C to +50 °C

<sup>1</sup> The indicated damping torque refers to a rotational speed of 20 rpm and an ambient temperature of 23 °C.

## FRT-C2 and FRN-C2 Rotary Dampers

### Flexible and cost efficient use

The damping direction of the simple FRT-C2 and FRN-C2 is either right, left or two-sided rotation. These ACE rotary dampers with plastic body can decelerate directly in the pivot point or linear through a gear and gear rack. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 15 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** 0 °C to +50 °C

**Pressure angle:** 20°

**Material:** Outer body, Gear: Plastic; Shaft: Plastic, steel

**Mounting:** In any position

**Tooth:** Involute gearing

**P.C.D.:** 8.8 mm

**No. of teeth:** 11

**Module:** 0.8

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request. Toothed plastic racks (modules 0.5 to 1.0) are available for the rotary dampers with pinions.

## FRT-D2 and FRN-D2 Rotary Dampers

### Flexible and cost efficient use

The damping direction of the ACE FRT-D2 and FRN-D2 rotary dampers with plastic body is either the right, left or two-sided rotation. They can decelerate directly in the pivot point or linear through a gear and gear rack. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 25 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** 0 °C to +50 °C

**Pressure angle:** 20°

**Material:** Outer body, Gear: Plastic; Shaft: Plastic, steel

**Mounting:** In any position

Continuous Rotation

## FRT-F2/K2 and FRN-F2/K2 Rotary Dampers

### For very long service life extension

The damping direction of FRT F2/K2 and FRN-F2/K2 is either the right, left or two-sided rotation. With a damping torque of up to 400 Ncm, this product family can even handle heavy components. These ACE rotary dampers can decelerate directly in the pivot point or linear through a gear and gear rack. They are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 40 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** 0 °C to +50 °C

**Material:** Outer body: Plastic; Shaft: Steel

**Mounting:** In any position

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

### Characteristics

#### At 23 °C ambient temperature

#### At 20 rpm rotational speed

### Performance

TYPES	<sup>1</sup> Damping torque Ncm	Damping direction	Weight kg
FRT-K2-502	50 +/- 10	bidirectional	0.080
FRT-K2-103	100 +/- 20	bidirectional	0.080
FRT-F2-203	200 +/- 40	bidirectional	0.110
FRT-F2-303	300 +/- 80	bidirectional	0.115

FRN-K2-L103	100 +/- 20	left	0.057
FRN-F2-L203	200 +/- 40	left	0.090

<sup>1</sup> The indicated damping torque refers to a rotational speed of 20 rpm and an ambient temperature of 23 °C.

### FFD Rotary Dampers

#### Precise braking without oil

In comparison to other rotary dampers, the ACE FFD product family does not need any fluid to generate the damping torque, but rather works on the principle of friction. That means temperature or speed changes have virtually no influence on the damping torque. The FFD is available in two different body variants and two types of bearings. ACE rotary dampers are maintenance-free and ready-to-install.

#### Technical Data

**Construction size:** Ø 25 to 30 mm

**Rotational speed max.:** 30 rpm

**Lifetime:** 30,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -10 °C to +60 °C

**Material:** Outer body: Plastic

**Mounting:** In any position

**Information to the shaft:** Ø +0 / -0.03

Hardness > HRC55, surface smoothness RZ<1µm

**Mounting information:** Turn the shaft in the opposite direction to the brake direction to avoid damaging the freewheel mount. No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

#### Ordering Example

FFD-25-FS-L-102

#### Complete details required when ordering

- Damping torque 102 = 0.1 Nm
- Damping torque 502 = 0.5 Nm
- Damping torque 103 = 1.0 Nm
- Damping torque 153 = 1.5 Nm
- Damping torque 203 = 2.0 Nm
- Damping torque 253 = 2.5 Nm
- Damping torque 303 = 3.0 Nm
- Note dimension C.

#### Model Type Prefix

- FS = Mounting Style with Flange, Model standard
- FW = Mounting Style with Flange, Model high
- SS = Mounting Style Standard, Model standard
- SW = Mounting Style Standard, Model high
- Combinations with W for higher damping torque.

#### Performance and Dimensions

<sup>1</sup> The indicated damping torque refers to a rotational speed of 20 rpm and an ambient temperature of 23 °C.

## FDT Rotary Dampers

### The flat disc brake for two-sided damping

The damping direction of the flat constructive ACE rotary damper FDT with robust steel body is two-sided rotation. It can brake directly in the pivot point of the square receptacle. ACE rotary dampers are maintenance-free and ready-to-install.

#### Technical Data

**Construction size:** Ø 47 to 70 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -10 °C to +50 °C

**Material:** Outer body: Steel; Output shaft sleeve: Nylon

**Mounting:** In any position

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

<sup>1</sup> The indicated damping torque refers to a rotational speed of 20 rpm and an ambient temperature of 23 °C.

## FDN Rotary Dampers

### The flat disc brake for one direction of rotation

The damping direction of the flat, strong FDN rotary dampers with steel body can be either right or left rotation. They can brake directly in the pivot point. ACE rotary dampers are maintenance-free and ready-to-install.

#### Technical Data

**Construction size:** Ø 47 to 70 mm

**Rotational speed max.:** 50 rpm

**Lifetime:** 50,000 cycles (1 cycle = 360° left-hand, 360° right-hand). Even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -10 °C to +50 °C

**Material:** Outer body: Steel

**Mounting:** In any position

**Information to the shaft:**

FDN-47: Ø 6 +0 / -0.03

FDN-57 to FDN-70: Ø 10 +0 / -0.03

Hardness > HRC55, surface smoothness  $R_z < 1 \mu\text{m}$

**Mounting information:** Turn the shaft in the opposite direction to the brake direction to avoid damaging the freewheel mount. No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

## FYN-P1 Rotary Dampers

### Small diameter, large damping torques

The damping direction of the rotary damper FYN-P1 can be either right or left rotation. The dampers can be directly mounted in the pivot point. During each reverse movement of the unilateral decelerating versions there is a certain return damping torque that depends on the size. Differentiation of the damping direction through the coloured shaft. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 18.5 mm

**Lifetime:** 50,000 cycles, even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Outer body, Shaft: Plastic

**Mounting:** In any position

**Rotation angle max.:** 115°

**Note:** Damping direction: Right hand damping = damping action in clockwise direction (when looking onto the output shaft or output shaft sleeve, depending on the damper type). A play of approx. 5° can occur at the beginning of movement.

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

### Performance

TYPES	Damping torque	Return Damping Torque	Damping direction	Weight kg

## FYN-N1 Rotary Dampers

### Small diameter, large damping torques

The damping direction of the rotary damper FYN-N1 can be either right or left rotation. The dampers can be directly mounted in the pivot point. During each reverse movement of the unilateral decelerating versions there is a certain return damping torque that depends on the size. Differentiation of the damping direction through coloured end cap. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 20 mm

**Lifetime:** 50,000 cycles, even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Outer body, Shaft: Plastic

**Mounting:** In any position

**Rotation angle max.:** 110°

**Note:** Damping direction: Right hand damping = damping action in clockwise direction (when looking onto the output shaft or output shaft sleeve, depending on the damper type). A play of approx. 5° can occur at the beginning of movement.

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

### Performance

TYPES	Damping torque	Return Damping Torque	Damping direction	Weight kg

## FYN-U1

### Rotary Dampers

#### Small, strong and very robust

The damping direction of the rotary damper FYN-U1 can be either right or left rotation. The dampers can be directly mounted in the pivot point. The body is made of especially robust die-cast zinc. During each reverse movement of the unilateral decelerating versions there is a certain return damping torque that depends on the size. ACE rotary dampers are maintenance-free and ready-to-install.

#### Technical Data

**Construction size:** Ø 16 mm

**Lifetime:** 50,000 cycles, even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Outer body, Shaft: Zinc die-cast

**Mounting:** In any position

**Rotation angle max.:** 115°

**Note:** Damping direction: Right hand damping = damping action in clockwise direction (when looking onto the output shaft or output shaft sleeve, depending on the damper type). A play of approx. 5° can occur at the beginning of movement.

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

## FYN-S1 Rotary Dampers

### The flat damper for constant component protection

The self-compensating FYN-S1 rotary damper with zinc die-cast body provides a constant sequence of movement for different masses. The damping direction can be either right or left rotation. During each reverse movement of the unilateral decelerating versions there is a certain return damping torque that depends on the size. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 60 mm

**Lifetime:** 50,000 cycles, even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Outer body: Zinc die-cast; Output shaft sleeve: Plastic

**Mounting:** In any position

**Rotation angle max.:** 130°

**Note:** Damping direction: Right hand damping = damping action in clockwise direction (when looking onto the output shaft or output shaft sleeve, depending on the damper type). A play of approx. 5° can occur at the beginning of movement.

**Mounting information:** No axial or radial forces may be induced via the shaft.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

### Performance

TYPES	Damping torque Nm	Return Damping Torque Nm	Damping direction	Weight kg
FYN-S1-R104	5 - 10	1.5	right	0.220
FYN-S1-L104	5 - 10	1.5	left	0.220

## FYT-H1 and FYN-H1 Rotary Dampers

### Specifically adjustable, strong braking force

The damping direction of the adjustable FYT-H1 and FYT-H1 can be right, left or two-sided rotation. During each reverse movement of the unilateral decelerating versions there is a certain return damping torque that depends on the size. The brakes have a particularly robust zinc die-cast body and shafts made of steel. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 45 mm

**Lifetime:** 50,000 cycles, even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Outer body: Zinc die-cast; Shaft: Steel

**Mounting:** In any position

**Rotation angle max.:** 105°

**Maximum side load:** 50 N

**Note:** Damping direction: Right hand damping = damping action in clockwise direction (when looking onto the output shaft or output shaft sleeve, depending on the damper type). A play of approx. 5° can occur at the beginning of movement.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

### Performance

TYPES	Damping torque Nm	Return Damping Torque Nm	Damping direction	Weight kg
FYT-H1	2 - 10	0.5	bidirectional	0.235
FYN-H1-R	2 - 10	0.5	right	0.235
FYN-H1-L	2 - 10	0.5	left	0.235

## FYT-LA3 and FYN-LA3 Rotary Dampers

### Adjustable high performance

The damping direction of this adjustable high-performance rotary damper can be right, left or two-sided rotation. During each reverse movement of the unilateral decelerating versions there is a certain return damping torque that depends on the size. The brakes have a particularly robust zinc die-cast body and shafts made of steel. ACE rotary dampers are maintenance-free and ready-to-install.

### Technical Data

**Construction size:** Ø 80 mm

**Lifetime:** 50,000 cycles, even after this time, the dampers still produce over approx. 80 % of their original damping moment. The service life may be significantly higher or lower, depending on the application.

**Operating temperature range:** -5 °C to +50 °C

**Material:** Outer body: Zinc die-cast; Shaft: Steel

**Mounting:** In any position

**Rotation angle max.:** 210°

**Maximum side load:** 200 N

**Note:** Damping direction: Right hand damping = damping action in clockwise direction (when looking onto the output shaft or output shaft sleeve, depending on the damper type). A play of approx. 5° can occur at the beginning of movement.

**Safety instructions:** Do not use rotary dampers as supports. Provide an external guide or support.

**On request:** Special designs available on request.

### Performance

TYPES	Damping torque Nm	Return Damping Torque Nm	Damping direction	Weight kg
FYT-LA3	4 - 40	4	bidirectional	1.720
FYN-LA3-R	4 - 40	4	right	1.725
FYN-LA3-L	4 - 40	4	left	1.725

### Calculation Example

#### Damping of a Lid

To select an appropriate rotary damper for the adjacent calculation example, the length and the weight or the centre of gravity of the flap have to be known. After determining the value of the max. torque at an unfavourable angle of the flap, select the appropriate damper.

#### Calculation Steps

1. Calculate max. torque damper will be exposed to (with example shown on the left max. torque is at  $\alpha = 0^\circ$ ).
2. Decide upon rotation speed desired.
3. Choose a rotary damper that can handle the torque calculated above.
4. With the aid of the damper performance curves, check if the r.p.m. given at your torque corresponds to the desired closing speed of the lid.
5. If the r.p.m. is too high – choose a damper with a higher torque rating.  
If the r.p.m. is too low – choose a damper with a lower torque rating.

Closing Torque  
 $M = L / 2 \cdot m \cdot \cos \alpha$   
 (L / 2 = centre of gravity)

m Mass of a lid [kg] (1 kg = 9.81 N)  
 L Length of lid from pivot [cm]  
 n Rotation speed [r.p.m.]

### Special Accessories

#### Toothed Racks for Rotary Dampers with Gear

Rotary dampers with gears are available in four standard modules which can be optionally supplied with plastic toothed racks as accessories.

**M0.5, M0.6, M0.8, M1.0**  
Toothed Rack

**M0.8P**  
Toothed Rack

#### Delivery Notes

**Delivery form:** Toothed plastic racks with modules 0.5 to 1.0 availables ex stock

**On request:** Toothed metal racks

#### Dimensions

Type	A mm	B mm	C mm	Model
M0.5	250	4	4.5	rigid, milled
M0.6	250	4	6	rigid, milled
M0.8	250	6	8	rigid, milled
M0.8P	170	8	4.1	flexible, milled
M1.0	250	9	9	rigid, milled
M1.0	500	10	10	rigid, milled

#### Mounting Information

The rotary axis, square receptacles or free-wheel receptacles are not designed for lateral loads. An external guide or bearing support is fundamentally recommended.

### Application Examples

#### FDT Finger protection when cutting bread

To exclude the possibility of injury when using bread slicing machines on self-service counters, the automatic bread slicing process does not start until the flap of the modern machine is closed. To simplify the operation and to thereby increase acceptance of the self-slicing principle among users, two-way rotary dampers of the type FDT-57 ensure smooth opening and closing of the door. Even when rotary dampers must act only in one direction, ACE has appropriate variants readily available.

Protective flaps secured with rotary dampers: the simple operation of bread slicing machines can then be easily managed by hand  
Daub Bakery Machinery BV, 5050 AB Goirle, Netherlands

#### FDN-R Invisible protection for cooker hoods

For ergonomic handling, modern cooker hoods can be driven by a motor into an up position and then down again. When driven downwards, an AC load can result in a total loss through current being fed back into the voltage source. One of the tasks of the ACE rotary dampers type FDN-63-R is to prevent this. The modern machine elements are also built to provide protection against motor failure. Sliding the hood down too quickly could lead to further costly damage to the hood and the ceiling console and even cause personal injury.

Rotary dampers in high-end cooker hoods safeguard the protection of drive units and protect chefs, even during power failures  
berbel Ablufttechnik GmbH, 48432 Rheine, Germany

# Vibration Control

Vibration-Isolating Pads  
Rubber-Metal Isolators  
Low Frequency Pneumatic Levelling Mounts

# Isolate Unwanted Vibrations Effectively

## Unique variety

**This product group from ACE includes innovative solutions to provide customers with the best assistance in insulation technology and vibration isolation. These machine elements are also distinguished by their light design and exemplary variety.**

The product range extends from extremely low frequency isolating pneumatic levelling mounts through to ready-to-install rubber-metal isolators and insulation plates. With this portfolio, ACE is capable of offering you customised vibration isolation and all almost any applications.

# Vibration Isolation

**Noise reduction and vibration isolation are becoming more and more important in our daily lives. This applies in particular to the workplace and the environments around production companies.**

Preventing noise emissions or harmful vibrations is therefore not only a necessity required by noise protection and occupational health and safety legislation; their sources must also be localised by means of targeted analyses in order to develop suitable improvement measures for achieving, for example, increased production quality. A second by-product of vibrations are their effects on the surrounding production environment and any measuring and testing facilities that may be in use.

## Advantages and function

- improved working conditions for people and the environment
- more accurate production tolerances and thereby increased product quality
- competitive and cost advantages thanks to lower reject rate in production
- increased production speed thanks to increased maximum machine dynamics
- longer tool and machine life thanks to lower stress
- faster and more accurate measuring results

For detailed  
information see  
special catalogue  
ACEolator

# Rubber-Metal Isolators

## Ready-to-install isolators for quick selection

Rubber-metal isolators and machine feet are supplied ready-to-install and are used in a large variety of vibration isolation applications. Common applications are engines, compressors, transfer systems, machines, fans and blowers.

### LEV

#### Levelling Mounts (height-adjustable machine feet)

Secure, adjustable stabilisation for all types of machines, transfer systems, assembly stations, etc.

### CM

#### Cup Mounts (cup elements)

For isolating machinery and equipment. Fail-safe isolators for all axes in any installation position. Application examples: compressors, off-road vehicles, engines, fans, etc.

### COM

#### Compression Mounts (pre-tensioned high-performance bearing surface)

Vertically acting isolators for machinery and equipment. Applications include: blowers, compressors, motors, generators, presses, etc.

### AAM

#### All Attitude Mounts (vibration-isolating fasteners)

Maintenance free isolators for decoupling parts and components in electronics, aerospace, the military, medicine, transfer systems, etc.

### SFM

#### Stable Flex Mounts (stable machine feet)

Extremely rugged and maintenance-free isolators, e.g. for marine applications, for diesel generators, in power generation or in off-road vehicles.

### BM

#### Bubble Mounts (low-frequency vibration isolators)

For protecting small devices and electronic components, e.g. in medical technology, aerospace, electronic systems or computers.

### UMO

#### Universal Mounts (universal connection isolators)

Maintenance-free connection isolators which can be implemented both radially and axially. Application examples: conveying systems, machinery and equipment, off-road, oil and gas industry, control systems, etc.

### FL

#### Flex Locs (quick fastening elements)

Simple, efficient components with versatile applications as isolating fasteners for decoupling structure-borne sound in enclosures, housings, equipment and machinery. For application in mechanical engineering, in buildings, vehicles, or navigation.

## Vibration-Isolating Pads

### Customised insulation technology through cutting and combining

A wide range of applications such as e.g. machine foundations, supports, decoupling elements, pipelines and subsequently protected machines require tailor-made solutions. Here with its product range of vibration insulating pads ACE offers comprehensive possibilities for insulation. The products are manufactured and supplied either as standard pads or as drawing parts according to customer request.

#### SLAB

##### Universal Damping Pads

For application on foundations for plants and machines, compressors, in pump stations, generators, for insulations, measuring tables, buildings, etc.

#### CEL

##### Low-Frequency Damping Pads

For use in foundations, buildings, transport routes, bridges, stairs, test benches, pump stations, generators, compressors, machines, etc.

#### PAD

##### Rugged Fibre and Elastomer Pads

For isolating and protecting foundations, e.g. of presses, plants, machines, as well as for use in pump stations, crane runways, bridges and heavy-duty applications

## Application overview

# Low Frequency Pneumatic Levelling Mounts

**Highly efficient insulation – it can hardly get any deeper**

Everywhere where perfect isolation of measuring tables, test equipment and high-performance machines are important the low frequency pneumatic levelling mounts PLM and PAL are a good choice. On request a detailed system analysis will be carried out at the customer and the perfect solution will be developed.

## PLM

### Pneumatic Air Spring Elements

For an efficient isolation of measuring equipment, high-speed presses and machines.

## PAL

### Air Spring Elements with Automatic Level Controls

Isolation against disruptive vibrations and level-adjustment for test and measuring equipment. Isolating at extremely low-frequencies, these components are used in the automotive industry and in aerospace engineering.

More information about Vibration Control can be found in our special catalog and on our homepage [www.ace-ace.com / Downloads](http://www.ace-ace.com/Downloads)

# Safety Products

**Safety Shock Absorbers, Safety Dampers  
Clamping Elements**

# Highest Protection under any Circumstances

For any budget and all requirements

**Safely slowing down damaging forces from moving loads or Emergency braking are united in this product group from ACE. Although the safety shock absorbers, profile dampers and clamping elements differ so much in design, every single ACE component provides the best protection for your machine.**

They demonstrate their main advantages in emergency stop situations and, based on the protection they provide, are very cost-effective. Furthermore, they can all be easily integrated in the existing construction designs and largely work independent of energy supplies.

# Safety Shock Absorbers

## Perfect protection for the worst case scenario

**As a cheaper alternative to the standard shock absorber, Safety shock absorbers are the tried and tested low cost method of preventing those occasional emergency stops. Designed for occasional use, they primarily serve as reliable, effective protection in emergency stopping for construction designs.**

The maintenance-free and ready-to-install machine elements are characterised in every respect by the well-known high ACE quality and maximum energy absorption of up to 480,000 Nm/Cycle. This means, in the product-family SCS33 up to SCS64 a service life of up to 1,000 full load emergency cycles is achieved. Safety shock absorbers from ACE are available in a large choice with strokes of 23 to 1,200 mm, and the arrangement of orifice pattern can be calculated and produced specifically to the customer's requirements and depending on the application.

## SCS33 to SCS64 Safety Shock Absorbers

### Industry design with high energy absorption

Effective emergency stop: The ACE safety shock absorbers from the SCS33 to 64 Series are based on the innovative technology of the successful industrial shock absorbers from the MAGNUM-Series. They are also maintenance-free and ready-to-install.

Due to the optimised characteristic curve for the respective application, the energy absorption of these hydraulic machine elements can be increased to more than twice the level of the MAGNUM model of ACE industrial shock absorber per stroke. Users benefit from a service life of up to 1,000 full load emergency cycles with a very good price-performance ratio. Their compact design in sizes M33x1.5 to M64x2 makes them easy to integrate into current applications.

These slimline, high-performance safety shock absorbers are only designed for emergency stop situations. They can be used for a number of tasks in gantries and conveyor systems, processing centres or assembly machines.

### Technical Data

**Energy capacity:** 310 Nm/Cycle to 18,000 Nm/Cycle

**Impact velocity range:** 0.02 m/s to 5 m/s. Other speeds on request.

**Operating temperature range:** -12 °C to +66 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Nitride hardened steel; Piston rod: Hard chrome plated steel; Rod end button: Hardened steel and corrosion-resistant coating; Return spring: Zinc plated or

plastic-coated steel; Accessories: Steel corrosion-resistant coating

**Damping medium:** Automatic Transmission Fluid (ATF)

**Application field:** Finishing and processing centres, Conveyor systems, Portal systems, Test stations

**Note:** The shock absorber can be pushed through its stroke. In creep speed conditions the shock absorber provides minimal resistance and there is no braking effect.

**On request:** Special oils, special flanges etc.

### SCS33EU

The calculation and selection of the most suitable damper should be carried out or be approved by ACE.

### Accessories

#### NM33

Locking Ring

#### QF33

Square Flange

Torque max.: 11 Nm  
Clamping torque: > 90 Nm  
Install with 4 machine screws

#### S33

Side Foot Mounting Kit

S33 = 2 flanges + 4 screws M6x40, DIN 912  
Torque max.: 11 Nm  
Clamping torque: 90 Nm

Because of the thread pitch the fixing holes for the second foot mount should only be drilled and tapped after the first foot mount has been fixed in position.

### Complete details required when ordering

- Moving load: m (kg)
- Impact velocity range: v (m/s) max.
- Creep speed: vs (m/s)
- Motor power: P (kW)
- Stall torque factor: ST (normal, 2.5)
- Number of absorbers in parallel: n

or technical data according to formulae and calculations on page 187.

### Ordering Example

Safety Shock Absorber **SCS33-50EU-1xxxx**  
Thread Size M33  
Max. Stroke without Positive Stop 50 mm  
EU Compliant  
Identification No. assigned by ACE

**Please indicate identification no. in case of replacement order**

## SDH38 to SDH63 Safety Shock Absorbers

### Low reaction forces with long strokes

Intelligent protective measure: The safety shock absorbers from the SDH38 to 63 series are also designed for emergency-stop applications. Strokes of up to 1,200 mm are possible with these maintenance-free and ready-to-install dampers. Low support forces result due to the large strokes.

The characteristic curve or damping characteristics of all safety shock absorbers from ACE is individually adjusted to the respective application, specific to the customer. The metering orifices for the respective application are specially calculated and produced. These tailor-made machine elements are the ideal protection because they are less expensive than industrial shock absorbers and are effective with up to 1,000 maximum full load emergency cycles possible.

Anyone who wants to reliably protect the end positions of rack operating equipment, conveyor and crane systems, heavy duty applications and test benches chooses these safety shock absorbers from ACE.

### Technical Data

**Energy capacity:** 3,600 Nm/Cycle to 229,100 Nm/Cycle

**Impact velocity range:** 0.5 m/s to 4.6 m/s. Other speeds on request.

**Reacting force:** At max. capacity rating = 51 kN to 210 kN

**Operating temperature range:** -20 °C to +60 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Painted steel; Piston rod: Hard chrome plated steel; Rod end button: Steel

**Damping medium:** HLP 46

**Filling pressure:** Approx. 5 bar. Rod return by integrated nitrogen accumulator.

**Application field:** Shelf storage systems, Test stations, Heavy load applications, Conveyor systems

**Note:** For creep speed applications, please consult ACE.

**On request:** Special oils, special flanges, additional corrosion protection etc. Integrated rod sensor for indicating the complete extension of the piston rod. Type normally closed or normally open, option PNP or NPN switch.

### SDH38EU-F Front Flange

### SDH38EU-R Rear Flange

### SDH38EU-S Foot Mount

## SDP63 to SDP160 Safety Shock Absorbers

### High return forces with gas pressure accumulator

**Reliability:** The emergency stop from the large scale SDP63 to 160 series have internal system seals. Even dirt or damages to the piston rod do not lead to a leakage or failure. Compressed gas accumulators allow return forces of up to 100 kN, which can make applications in multiple bridge crane systems safer, for example. The absorber body and the robust, large-sized piston rod bearing are also designed for heavy duty operations.

Just like all ACE safety shock absorbers, the characteristic curve or damping characteristics of each individual absorber is individually adjusted to the respective application.

Whether its crane systems or machines in heavy duty applications e.g. in the metal industry or in mining, these powerful safety shock absorbers reliably protect construction designs against expensive failure.

### Technical Data

**Energy capacity:** 9,100 Nm/Cycle to 582,000 Nm/Cycle

**Impact velocity range:** 0.5 m/s to 4.6 m/s. Other speeds on request.

**Reacting force:** At max. capacity rating = 110 kN to 1.000 kN

**Operating temperature range:** -20 °C to +60 °C. Other temperatures on request.

**Mounting:** In any position

**Positive stop:** Integrated

**Material:** Outer body: Painted steel; Rod end button: Steel; Piston tube: Hard chrome plated steel

**Damping medium:** HLP 46

**Filling pressure:** Approx. 5 bar. Rod return by integrated nitrogen accumulator.

**Application field:** Shelf storage systems, Heavy load applications

**Note:** The shock absorber can be pushed through its stroke. In creep speed conditions the shock absorber provides minimal resistance and there is no braking effect.

**On request:** Special oils, special flanges, additional corrosion protection etc.

## General Instructions

### Permitted Use

ACE safety shock absorbers are machine elements to brake moving masses in a defined end position in emergency stop situations for axial forces. The safety shock absorbers are not designed for regular operational usage.

### Calculation of safety shock absorbers

The calculation of safety shock absorbers should generally be performed or checked by ACE.

### Deceleration Properties

The orifice sizing and drill pattern in the pressure chamber are individually designed for each safety shock absorber. The respective absorption characteristic is optimised corresponding to the maximum mass that occurs in the emergency stop and the impact speed. Correspondingly, each safety shock absorber is given an individual identification number.

### Model Code

For types SCS33 to 64, the individual five-digit identification numbers can be taken from the last digits of the shock absorber model code shown on the label. Example: SCS33-50EU-1XXXX. For type series SDH38 to SDH63 and SDP63 to SDP160, the identification number is a five digit number. Example: SDH38-400EU-F-XXXXX. In addition to the model code, the label also shows the authorised maximum impact velocity and maximum authorised impact mass for the unit.

### Mounting

To mount the shock absorber, we recommend the use of original ACE mounting accessories shown in catalogue.

The mounting of each shock absorber must be exactly positioned so that the reaction force (Q) can be adequately transmitted into the mounting structure.

ACE recommends installation via the front flange -F mounting style that ensures the maximum protection against buckling. The damper must be mounted so that the moving loads are decelerated with the least possible side loading to the piston rod. The maximum permissible side load angles are detailed in our current catalogue.

The entire stroke length must be used for deceleration because only using part of the stroke can lead to overstressing and damage to the unit.

### Mounting style front flange

Safety Shock Absorber SDH

Safety Shock Absorber SDP

### Environmental Requirements

The permissible **temperature range** for each shock absorber type can be found in our current catalogue.

**Caution:** Usage outside the specified temperature range can lead to premature breakdown and damage of the shock absorbers which can then result in severe system damage or machine failures.

Trouble free operation outdoors or in damp environments is only warranted if the dampers are coated with a specific corrosion protection finish.

### Initial Start-Up Checks

First impacts on the shock absorber should only be tried after correctly mounting and with reduced impact speeds and – if possible – with reduced load. Differences between calculated and actual operating data can then be detected early on, and damage to your system can be avoided. If the shock absorbers were selected on calculated data that does not correspond to the maximum possible loading (i.e. selection based on drive power being switched off or at reduced impact speed) then these restricted impact conditions must not be exceeded during initial testing or subsequent use of the system. Otherwise you risk damaging the shock absorbers and/or your machine by overstressing materials. After the initial trial check that the piston rod fully extends again and that there are no signs of oil leakage. Also check that the mounting hardware is still securely tightened. You need to satisfy yourself that no damage has occurred to the piston rod, the body, or the mounting hardware.

### Fixed Mechanical Stop

Safety shock absorbers do not need an external stop as a stroke limiter. The stroke of the safety absorber is limited by the stop of the impact head on the shock absorber. For types SCS33 to SCS64, the fixed stop point is achieved with the integrated stop collar.

### What Needs to be Checked after a Full Load Impact?

Safety shock absorbers that were originally checked only at reduced speed or load need to be checked again after a full load impact (i.e. emergency use) has occurred. Check that the piston rod fully extends to its full out position, that there are no signs of oil leakage and that the mounting hardware is still securely fixed. You need to satisfy yourself that no damage has occurred to the piston rod, the body, or the mounting hardware. If no damage has occurred, the safety shock absorber can be put back into normal operation (see **initial start-up**).

### Maintenance

Safety shock absorbers are sealed systems and do not need special maintenance. Safety shock absorbers that are not used regularly (i.e. that are intended for emergency stop systems) should be checked within the normal time frame for safety checks, but **at least once a year**. At this time special attention must be paid to checking that the piston rod resets to its fully extended position, that there is no oil leakage and that the mounting brackets are still secure and undamaged. The piston rod must not show any signs of damage. Safety shock absorbers that are **in use regularly** should be checked **every three months**.

### Repair Notice

If any damage to the shock absorber is detected or if there are any doubts as to the proper functioning of the unit please send the unit for service to ACE. Alternatively contact your local ACE office for further advice.

Detailed information on the above listed points can be taken from the corresponding operating and assembly instructions.

### Calculation Bases for the Design of Safety Shock Absorbers

More formulae on page 10 to 13

ACE shock absorbers provide linear deceleration and are therefore superior to other kinds of damping element. It is easy to calculate around 90 % of applications knowing only the following four parameters:

1. Mass to be decelerated (weight) **m** [kg]
2. Impact velocity at shock absorber **v<sub>D</sub>** [m/s]
3. Propelling force **F** [N]
4. Number of absorbers in parallel **n**

#### Key to symbols used

W <sub>1</sub>	Kinetic energy per cycle	Nm	<sup>2</sup> v <sub>D</sub>	Impact velocity at shock absorber	m/s
W <sub>2</sub>	Propelling force energy per cycle	Nm	F	Propelling force	N
W <sub>3</sub>	Total energy per cycle (W <sub>1</sub> + W <sub>2</sub> )	Nm	c	Cycles per hour	1/hr
<sup>1</sup> W <sub>4</sub>	Total energy per hour (W <sub>3</sub> · x)	Nm/hr	s	Shock absorber stroke	m
me	Effective weight	kg	Q	Reaction force	N
m	Mass to be decelerated	kg	t	Deceleration time	s
n	Number of shock absorbers (in parallel)		a	Deceleration	m/s <sup>2</sup>
<sup>2</sup> v	Velocity at impact	m/s			

<sup>1</sup> All mentioned values of W4 in the capacity charts are only valid for room temperature. There are reduced values at higher temperature ranges.

<sup>2</sup> v or v<sub>D</sub> is the final impact velocity of the mass. With accelerating motion the final impact velocity can be 1.5 to 2 times higher than the average. Please take this into account when calculating kinetic energy.

In all the following examples the choice of shock absorbers made from the capacity chart is based upon the values of (W<sub>3</sub>), (W<sub>4</sub>), (me) and the desired shock absorber stroke (s).

**Note:** When using several shock absorbers in parallel, the values (W<sub>3</sub>), (W<sub>4</sub>) and (me) are divided according to the number of units used.

Application	Formulae	Example

## Application Examples

### SCS45EU

#### Controlled emergency stop

ACE safety shock absorbers protect precision assembly jigs for the aircraft industry. The basic mount of this coordinate measuring machine for the production of parts in the aircraft industry is made of granite and must not be damaged. To avoid damage from operating errors or mishandling, all movement axes were equipped with safety shock absorbers of the type SCS45-50EU. If the turntables malfunction the safety shock absorbers decelerate the loads before expensive damage can occur to the granite measuring tables.

Optimally protected turntable

### SCS33EU, SCS45EU

#### High-level protection of linear modules

Safety shock absorbers produced by ACE are installed in the top linear system models of one of the most prestigious companies in the field of drive and control technology. Their job: to protect the z-axis from damage caused by uncontrolled movements. Various safety dampers are used for different load ranges. Tests have shown that, in the worst case, a collision speed of up to 5 m/s might occur. To be on the safe side, the interpretations were based in all cases on a slightly higher value.

For protecting equipment and modules such as these, the SCS series from ACE is the ideal solution in the emergency stop sector  
Roth GmbH & Co. KG, 90411 Nürnberg, Germany and  
Bosch Rexroth AG, 97816 Lohr am Main, Germany

**SDP160EU**

**Customized buffer beam dampers**

Driving into lock gates should be specifically facilitated when navigating through Dutch river locks. That is why ACE developed special dampers, based on existing safety shock absorbers but with optimized characteristics, a fixed stop and a stroke of 800 mm. These are able to absorb 500,000 Nm, which means they can cope with fully loaded ships and also the mechanical impacts resulting from water movement. To return to the initial position, the safety shock absorbers operate on the same nitrogen-based principle as the gas springs produced by the damping specialists in Langenfeld.

Heavy safety shock absorbers, which are specially designed for this application, are able to brake in lock masses of up to four million kg  
Mourik Limburg BV, 6101 AJ Echt, Netherlands

**SDH38EU**

**Safe driving to the end positions**

The aim was to protect a driving simulation capsule on two of its eight axes. The demands placed on a potential emergency stopper were high because it was clear that its failure would lead to massive damage to the complete construction as well as to the capsule. Even the possibility of damage to the health of the test personnel could not be ruled out and was taken into consideration in a diverse range of mass-speed combinations. Two ACE safety shock absorbers now safely contain destructive forces, e.g. during power outages, and eliminate high risks.

ACE safety shock absorbers protect end positions in two axes of a driving simulator

# Safety Dampers

## Top for emergency stopping

**The extremely successful TUBUS series from ACE is suitable for emergency stopping, as overrun protection or as end stop dampers. Available in different variations for heavy duty or crane installations, these profile dampers are perfect when loads do not need to be instantly decelerated or when working under extreme conditions.**

Manufactured in co-polyester elastomer, the highly resistant absorbers provide high force and energy absorption in areas where other materials fail or where a similarly high service life of up to 1 million load changes cannot be achieved. They are cost-effective and distinguished by the small, light design. With energy absorption within a range of 450 and 17,810 Nm, they can be considered as an alternative to hydraulic end position damping.

# TUBUS TC and TC-S

## Safety Dampers

### Compact powerhouse

For even more protection: The profile dampers from the TC range of the ACE TUBUS-Series can also be used as safety dampers. These maintenance-free, ready-to-install damping elements made of co-polyester elastomer have been specially developed for use in crane systems and fulfil the international industry standards OSHA and CMAA. In the special TC-S design, managed to achieve the spring rate required for crane systems with the unique dual concept.

Whether TC-S or TC, this range of models represents a cost-effective solution with high energy absorption for energy management systems. The very small and light design of Ø 64 mm to Ø 176 mm progressively covers energy absorption within a range of 450 Nm to 17,810 Nm.

The profile dampers from the TC range protect cranes, loading and lifting equipment, hydraulic units and much more.

### Technical Data

**Energy capacity:** 630 Nm/Cycle to 17,810 Nm/Cycle

**Energy absorption:** 31 % to 64 %

**Dynamic force range:** 80,000 N to 978,000 N

**Operating temperature range:** -40 °C to +90 °C

**Construction size:** 64 mm to 176 mm

**Material hardness rating:** Shore 55D

**Material:** Profile body: Co-Polyester Elastomer

**Mounting:** In any position

**Environment:** Resistant to microbes, seawater or chemical attack. Excellent UV and ozone resistance. Material does not absorb water or swell.

**Impact velocity range:** Max. 5 m/s

**Torque max.:**

M12: 50 Nm

M16: 40 Nm (DIN912)

M16: 120 Nm (shouldered screw)

**Application field:** Crane systems, Loading and lifting equipment, Hydraulic devices, Electro-mechanical drives

**Note:** Suitable for emergency stop applications and for continuous use. For applications

with preloading and increased temperatures please consult ACE.

**On request:** Special strokes, -characteristics, -spring rates, -sizes and -materials.

### TC

### Characteristics

**Type TC90-49**  
**Energy-Stroke Characteristic (dynamic)**  
**(with impact velocity over 0.5 m/s)**

**Type TC90-49**  
**Force-Stroke Characteristic (dynamic)**  
**(with impact velocity over 0.5 m/s)**

With the aid of the characteristic curves above you can estimate the proportion of the total energy that will be absorbed.

Example: With impact energy of 1,300 Nm the Energy-Stroke diagram shows that a stroke of about 38 mm is needed.

On the Force-Stroke diagram you can estimate the proportion of absorbed energy to rebound energy at this stroke length.

Note: With these types the return force towards the end of the stroke is significant and we recommend you try to use a minimum of 90 % of the total stroke available.

**Dynamic ( $v > 0.5$  m/s) and static ( $v \leq 0.5$  m/s) characteristics of all types are available on request.**

**The calculation and selection of the most suitable damper should be carried out or be approved by ACE.**

# TUBUS TI

## Safety Dampers

### Compact one-off deceleration

Once only, but safely: ACE now offers these innovative single use TUBUS TI absorbers for emergency stop applications as an alternative to the successful TUBUS profile dampers. In comparison to standard elastomer absorbers, these safety dampers ensure energy absorption of up to 96 % without a recoil effect. The dampers are deformed in the impact and cannot be reused afterwards.

The easy to assemble and maintenance-free single hit damper are also a cost-effective alternative to the hydraulic safety shock absorbers from ACE. They are made of a high quality synthetic with an inside metal core and absorb up to 4,510 Nm energy.

The TUBUS TI is mainly used as emergency stop damping in linear axes, tool machines, servo drives with high speeds and other similar areas.

### Technical Data

**Energy capacity:** 562 Nm/Cycle to 4,510 Nm/Cycle

**Energy absorption:** 91 % to 96 %

**Dynamic force range:** 37,100 N to 121,100 N

**Operating temperature range:**

-40 °C to +90 °C, Co-polyester Elastomer  
-25 °C to +50 °C, Polymer

**Construction size:** 32 mm to 50 mm

**Material:** Profile body: Co-Polyester elastomer or polymer; Guide sleeve: Metal

**Mounting:** In any position

**Environment:** Resistant to lubricants and chemical attack according to resistance list. No UV resistance.

**Impact velocity range:** Max. 5 m/s

**Torque max.:** Finger tight

**Application field:** Emergency stop damping in linear axes, Portal systems, Test stations, Electro-mechanical drives

**Note:** The single-use damper must be replaced after each impact.

**On request:** Other construction sizes on request.

# Clamping Elements

## On-the-spot clamping and stopping in emergencies and other situations

Clamping elements from the LOCKED series also serve the purpose of safety. These ACE products clamp and decelerate loads and are suitable for perfectly controlled holding, both linear and rotary, in all processes.

Alongside ACE LOCKED solutions for conventional rail, rod or rotation clamping, special clamps with safety function for Z-axes, which reliably help secure axes with a gravitational load, are available in the LOCKED LZ-P series. The latter solution is available for both pneumatic operation and as an electric version. Whether Z-axes, linear guide, rod or rotation clamping, the choice is (typical of ACE) as large as the performance capacity of the products, which are compatible with the solutions of all standard manufacturers.

**LOCKED by ACE. After all, safe is safe.**

**Increased process reliability**

**Available as clamping and emergency stop brakes**

**Very short stop distances**

**Very high clamping forces**

**Compact designs**

**Ideal for all standard sizes**

## Rail Clamping

### For safe deceleration of rail-guided construction elements

Safe deceleration of a mass that is traversed with the help of a rail and guide rail and track carriage combination must be complied with and not only for safety reasons; reliable clamps in the production processes are also becoming increasingly important.

Both features can be taken care of by the clamping elements from ACE. All clamping elements work with the patented spring steel plate system.

This system achieves braking and clamping forces of up to 10,000 N. The clamping elements are always individually adapted to the used linear guide. They are available for all rail sizes and profiles for all renowned manufacturers.

### Function of clamping elements LOCKED PL/SL/PLK/SLK

All process and safety clamps work with the reinforced spring steel plate system.

Compressed air is introduced between the two spring plates, which are connected with a surrounding rubber coating.

If pressure is applied, the clamping element can freely move; if the clamping element is vented clamping to the guide rail follows.

Clamping element ventilated

#### Released

The chamber filled with compressed air between the spring steel plates relaxes and thus releases the clamping/brake pads from the rail. The clamping element is now free to move.

Clamping element vented

#### Engaged

The clamping force of the mechanically pre-stressed spring steel plates is transferred to the clamping/brake pads as holding force. The clamping element is clamped on the guide rail.

### Slot dimensions between braking and clamping linings and linear guide rail

The internal dimension "I" between the linings of every LOCKED rail clamping is ground to an exact value.

This is always 0.01 to 0.03 mm greater than the upper limit J max. of the respective linear guide rail (see drawing), resulting from the manufacturer's directives.

The maximum holding force results at J max. and, in the most unfavorable case, holding force losses up to 30 % can occur (see table).

Air Gap Lining/Linear Guide Rail mm	Loss in Holding Force %
0.01	5
0.03	10
0.05	20
0.07	30

### Different brake pads for PL/PLK and for SL/SLK

The process clamps and safety clamps are available completely identical in their structure.

They differ only in the clamping and brake pads material.

Clamping

#### Position Clamping

The types of the LOCKED series PL and PLK are designed for clamping directly on the linear guide. The clamping linings are produced from tool steel and offer 100 % clamping force, even in the case of lubricated rails.

Braking

#### Position Clamping and Emergency Stop Braking

With the typical SL, SLK, low-wear sinter graphite linings are employed. These enable both a position clamping, as well as emergency stop braking on the linear guide. In case of lubricated rails, a stopping force of 60 % of the nominal stopping force should be considered.

## Rod Clamping

### The modular solution for exact holding at certain positions

Safe and reliable stopping at a position or an operating state is an important part of many production processes. This task can be performed by the clamping elements from ACE. If clamping on a rod is required, the clamping elements of the PN and PRK families are the right choice.

Thanks to the patented spring steel plate system the rod clamps transfer clamping forces of up to 27,000 N directly to the (piston) rod.

The PN and PRK rod clamps can absorb both axial and rotary forces.

### Function of clamping elements LOCKED PN and PRK

Consisting of a deck plate, one to three clamping units and a base plate, all rod clamps work with the reinforced spring steel plate system.

Through that, both axial and rotary forces can be absorbed.

Clamping element is released

#### Released

The membrane filled with compressed air relaxes the spring steel plate system and releases the clamping sleeve.

Clamping element is engaged

#### Engaged

The clamping force of the mechanically pre-stressed spring steel plates system is transferred as a holding force into the clamping sleeve. The rod or shaft is engaged.

### Intelligent component system solution

By connecting up to three clamping units between the base and deck plates, it is possible to easily increase the clamping force.

Modular construction

### Component tolerances for LOCKED PN and PRK

Design-related, the addition of the individual component tolerances leads to an elastic axial tolerance allowance. This axial tolerance allowance can be up to 500 µm in the clamped status, according to implementation!

The axis/shaft/rod must be machined with at least h9-fit (or better) above h5. Deviations from the prescribed tolerance can lead to reduction of the stopping force, or functional failure.

Rod clamping

## Rotational Clamping

### The reliable protection against twisting

Reliable holding and securing against a rotation of a position are important elements in many production processes.

This task can be performed by means of the clamping elements of the Locked R family. The rotational clamps can, thanks to the patented spring steel plate system, transfer holding torques of up to 4,680 Nm to the shaft.

The spring accumulator can immediately clamp the axis during a power failure.

### Function of clamping elements LOCKED R

The reinforced spring steel plate system transfers holding torques in the shortest possible time.

Clamping element is released

#### Released

The membrane filled with compressed air relaxes the spring steel plate system and releases the clamping ring. The shaft is free to move.

Clamping element is engaged

#### Engaged

The clamping force of the membrane/spring steel plates systems is transferred to the holding force of the clamping ring. The shaft is clamped.

### Function of clamping elements LOCKED Z with additional air

If higher holding torques are required, the rotational clamps with an additional air function are used.

With the same size, significantly higher holding torques are achieved.

Increased clamping force with additional air

#### Engaged with additional air

By filling the outer membrane chamber with additional compressed air (4 or 6 bar), there is the possibility to increase the clamping force. The clamping element is engaged in this condition.

## LOCKED PL Clamping Elements

### High clamping power for all rail profiles

Always on the safe side: The process clamping elements from the LOCKED series PL clamp directly onto the clear area of guide rails on linear modules with forces of up to 10,000 N. They are individually adjusted to the linear guide being used and are available for all rail sizes from 20 to 65 mm and profiles from all renowned manufacturers.

This series achieves 100 % clamping force even on greased rails, due to the steel pads that are used. It offers optimum static clamping with up to 1 million cycles or up to 500 emergency braking operations. These process clamping elements also impress with their low system costs in comparison with hydraulic and electric solutions.

The various models from the LOCKED Series PL from ACE are mainly used on machine tools and customised machines.

#### Technical Data

**Holding forces:** 540 N to 10,000 N

**Rail sizes:** 20 mm to 65 mm

**Clamping cycles:** 1,000,000/500. Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive) or 6 bar

Issue 08.2016 – Specifications subject to change

## LOCKED PLK

### Clamping Elements

#### High clamping power for all compact design rail profiles

Small can clamp perfectly too: The LOCKED-Series PLK clamping elements are more compact than the Series PL components. They also clamp directly onto the respective linear guide, suit all standard rail sizes from 15 to 55 mm and profiles from the known suppliers and are extremely reliable and space-saving.

Thanks to the patented spring steel plate system, the LOCKED-Series PLK achieves clamping and holding forces of up to 2,100 N with the shortest reaction times when vented. The LOCKED-Series PLK achieves 100 % clamping force due to the steel pads that are used, even on greased rails. The clamping elements represent the maximum holding forces. Whether in the 4 or 6 bar version, they are good for up to 1 million cycles or up to 500 emergency braking operations.

Representatives of the LOCKED-Series PLK from ACE are primarily used in mechanical engineering and customised machines.

#### Technical Data

**Holding forces:** 300 N to 2,100 N

**Rail sizes:** 15 mm to 55 mm

**Clamping cycles:** 1,000,000/500. Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive) or 6 bar

**Material:** Outer body: Tool steel

**Pneumatic medium:** Dried, filtered air

**Operating temperature range:** 15 °C to 45 °C

**Application field:** Tool machines, Transport systems, Feeder installations, Positioning tables

**Note:** If requested installation drawings of the respective types are provided.

**On request:** Special designs on request.

### PLK

The calculation and selection of the most suitable clamping element should be carried out or be approved by ACE.

## LOCKED SL

### Clamping Elements

#### Combined clamping and braking

Always on the safe side: The safety clamping elements from the LOCKED series SL clamp and brake directly on the clear area of guide rails on linear modules with forces of up to 10,000 N. They are individually adjusted to the linear guide being used and are available for all rail sizes from 20 to 65 mm and profiles from all renowned manufacturers.

Special brake pads made of low wear sintered metal are used for the additional emergency stop braking functions in safety clamping elements from the LOCKED series SL. The SL series offer optimum static clamping with a service life up to 1 million cycles or up to 500 emergency braking operations. They also offer low system costs in comparison with hydraulic and electric solutions.

The LOCKED-Series SL is particularly used in machinery and special purpose machines.

#### Technical Data

**Holding forces:** 540 N to 10,000 N

**Rail sizes:** 20 mm to 65 mm

**Clamping cycles/emergency use:**  
1,000,000/500

Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive)  
or 6 bar

**Material:** Outer body: Tool steel

## LOCKED SLK

### Clamping Elements

#### Combined compact design clamping and braking

Small can clamp perfectly too: The LOCKED-Series SLK clamping elements are more compact than the Series SL. They also clamp directly onto the respective linear guide, suit all standard rail sizes from 15 to 55 mm and profiles from the known suppliers and are extremely reliable and safe.

Thanks to the patented spring steel plate system, the Series SLK achieves clamping and holding forces of up to 2,100 N with the shortest reaction times when vented. Thanks to the sintered metal coatings and the clamping function in emergency stop (e.g. in case of a power failure), this range enables braking directly on the rail. All clamping elements offer the maximum holding and braking forces and achieve up to 1 million clamping cycles or up to a maximum of 500 emergency braking operations in the 4 and 6 bar version.

The LOCKED-Series SLK are used in mechanical engineering and customised mechanical engineering.

#### Technical Data

**Holding forces:** 300 N to 2,100 N

**Rail sizes:** 15 mm to 55 mm

**Clamping cycles/emergency use:** 1,000,000/500. Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive) or 6 bar

**Material:** Outer body: Tool steel

**Pneumatic medium:** Dried, filtered air

**Operating temperature range:** 15 °C to 45 °C

**Application field:** Tool machines, Transport systems, Feeder installations, Positioning tables

**Note:** If requested installation drawings of the respective types are provided.

**On request:** Special designs on request.

## LOCKED LZ-P

### Clamping Elements

#### Certified safety clamping

Innovative and BG certified: The pneumatic clamping elements from the LOCKED-Series LZ-P have been specially designed for safe, reliable clamping on the vertical or Z-axes. The wedge principle makes sure that the gravity loaded axis does not drop. The brake wedges are pushed on both sides against the flat parallel surfaces of the guide rail in case of a loss of pressure.

Initially developed for Bosch-Rexroth rails in sizes 15 and 25 mm, a test certificate from the trade association was awarded after extensive tests on these clamping elements. Further certifications from other rail manufacturers and sizes are prepared and can be implemented within the shortest time. Users achieve holding forces of up to 2,500 N.

Pneumatic clamping elements from the LOCKED-Series LZ-P are used in all sectors of modern mechanical engineering and customised machine tools.

### Technical Data

**Holding forces:** 1,500 N to 2,500 N

**Rail sizes:** 15 mm and 25 mm Bosch Rexroth

**Clamping cycles:** 1,000,000

**Mounting:** Vertical

**Effective direction:** Z-axes toward gravity

**Operating pressure:** 4.8 bar to 8 bar

**Material:** Outer body: Tool steel; Brake components: Steel

**Pneumatic medium:** Dried, filtered air

**Operating temperature range:** 0 °C to 60 °C

**Application field:** Z-axes, Vertical conveyor systems, Jacking applications

#### LZ-P

The calculation and selection of the most suitable clamping element should be carried out or be approved by ACE.

#### Ordering Example

Process Clamping Z-Axis \_\_\_\_\_ **LZ-P15-X**

## LOCKED PN Clamping Elements

### Rod clamping with maximum clamping force

Immediate clamping in case of loss of pneumatics: Suitable for rods with diameters of 20 to 40 mm, the clamping elements from the LOCKED-Series PN absorb the forces axially and rotationally. With holding forces of up to 36,000 N, they reach or exceed the levels of hydraulic clamps. The system costs are however lower.

Alongside clamping in both directions of motion, the LOCKED-PN also surprises with its compact design. They need less installation space and enable short rod lengths. For versions with ISO pneumatic cylinders, the base plate is coordinated to the dimensions of the flange sizes of standard cylinders according to ISO 15552. Users appreciate the modular system. It allows several segments to be stacked so that the necessary clamping force can be attained for every application.

The areas of application for the LOCKED-Series PN are mechanical engineering and machine tools.

### Technical Data

**Holding torques:** 15 Nm to 720 Nm

**Holding forces:** 1,400 N to 36,000 N

**Rod diameter:** Ø 20 mm to Ø 40 mm

**Clamping cycles:** 1,000,000. Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive) or 6 bar

**Material:** Outer body: Tool steel

**Pneumatic medium:** Dried, filtered air

**Operating temperature range:** 10 °C to 45 °C

**Application field:** Jacking systems, Light presses, Punching/stamping machines, Stacking units

**Note:** When mounting, use hardened piston rod.

**On request:** Special designs as for example special diameters and accessories available on request.

#### PN

The calculation and selection of the most suitable clamping element should be carried out or be approved by ACE.

<sup>1</sup> The listed holding forces are reached under optimum conditions. We recommend a safety factor of > 10 %. Please note that surface, material and cleanliness of the rod as well as wear and tear and the use of rod wipers lead to different holding forces. Test the clamping needed for series production or safety applications in its specific application environment and measure the actual values.

## LOCKED PRK Clamping Elements

### Rod clamping with maximum clamping force in a compact size

Compact and safe: when space becomes restricted, the compact clamping elements from the LOCKED-Series PRK come into their own. As pneumatic rod clamping with low heights of 28 to 34 mm, they provide clamping forces of up to 5,000 N.

Clamping is carried out by a diaphragm spring-plate system and is released when compressed air is applied. Clamping elements from the LOCKED-Series PRK absorb the forces on rods with diameters between 20 and 40 mm both axially and rotationally. The function makes them suitable for use as static clamping without pressure, because the failure or drop of pneumatic pressure triggers immediate clamping. High clamping forces with low system costs compared with hydraulic and electric solutions make these clamping elements particularly interesting.

Models from the LOCKED-Series PRK are used in mechanical engineering and customised machine tools.

### Technical Data

**Holding torques:** 7 Nm to 100 Nm

**Holding forces:** 700 N to 5,000 N

**Rod diameter:** Ø 20 mm to Ø 40 mm

**Clamping cycles:** 1,000,000. Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive) or 6 bar

**Material:** Outer body: Tool steel

**Pneumatic medium:** Dried, filtered air

**Operating temperature range:** 10 °C to 45 °C

**Application field:** Jacking systems, Light presses, Punching/stamping machines, Stacking units

**Note:** When mounting, use hardened piston rod.

**On request:** Special designs as for example special diameters and accessories available on request.

### PRK

The calculation and selection of the most suitable clamping element should be carried out or be approved by ACE.

### Complete details required when ordering

Operating pressure: 4 bar or 6 bar

### Ordering Example

Rod Clamping Compact \_\_\_\_\_ **PRK80-25-6B**  
 Cylinder Nominal Diameter 80 mm \_\_\_\_\_  
 Rod Diameter 25 mm \_\_\_\_\_  
 6B = 6 bar Type \_\_\_\_\_  
 4B = 4 bar Type \_\_\_\_\_

### Performance and Dimensions

TYPES	<sup>1</sup> Holding force N	Holding torque Nm	Operating pressure bar	A mm	B mm	D mm	E mm	M	N	Weight kg
PRK63-20-4B	700	7	4	92	80	28	2.1	M5	G1/8	1.15

PRK80-25-4B	1,050	12	4	118	104	29	2.14	M6	G1/8	2.10
PRK80-25-6B	1,500	17	6	118	104	29	2.14	M6	G1/8	2.10
PRK125-40-4B	3,500	70	4	168	152	29	3	M6	G1/8	4.90
PRK125-40-6B	5,000	100	6	168	152	29	3	M6	G1/8	4.90

<sup>1</sup> The listed holding forces are reached under optimum conditions. We recommend a safety factor of > 10 %. Please note that surface, material and cleanliness of the rod as well as wear and tear and the use of rod wipers lead to different holding forces. Test the clamping needed for series production or safety applications in its specific application environment and measure the actual values.

## LOCKED R Clamping Elements

### Strong holding force on the shaft

Direct clamping on the shaft: Rotation motions are prevented by the LOCKED-Series R. Their clamping elements are available for shaft diameters of 50 to 340 mm and ensure maximum holding forces.

The clamp is immediately applied by the diaphragm and spring-plate system when pressure is lost. Pneumatic quick-switch valves reduce the reaction times. The costs are low in comparison with hydraulic clamping systems. Their performance is, however, achieved or exceeded despite the compact and easy to assemble design. Special versions for YRT bearings as well as active clamping elements are additionally available. ACE recommends the use of the optional shaft flange as wear protection. The clamping force can be increased considerably by the use of the additional air function.

Models from the LOCKED-Series R are also used in mechanical engineering and customised machine tools.

### Technical Data

**Holding torques:** 42 Nm to 4,680 Nm

**Shaft diameter:** Ø 50 mm to Ø 340 mm

**Clamping cycles:** 1,000,000. Higher values on request.

**Mounting:** In any position

**Operating pressure:** 4 bar (automotive) or 6 bar

**Material:** Outer body: Hardened fine-grain structural steel, inner bore ground

**Pneumatic medium:** Dried, filtered air

**Operating temperature range:** 10 °C to 45 °C

**Application field:** Drive shafts, Torque motors, Conveyor systems

**Note:** If requested installation drawings of the respective types are provided.

**On request:** Special designs and customised solutions e.g. YRT bearing up to Ø 460 mm and shaft flange available on request.

R

The calculation and selection of the most suitable clamping element should be carried out or be approved by ACE.

## Application Examples

### SL Special LOCKED SL elements for emergency stops

In order to secure the processing position of a special lathe in both the horizontal and the vertical axis, ACE LOCKED elements of the type SL35-1-6B are installed. They have the further advantage of preventing slippage through the vertical axis in the case of a malfunction. The products used in the SL-series not only have the correct track width and offer very high process clamping forces of up to 10,000 N, but can also apply the same force as an emergency-stop braking function. This is due to the specially integrated brake linings made of low-wear sintered metal.

ACE clamping and safety elements maintain a rock-solid hold on the axes in special lathes and secure the predetermined positions both horizontally and vertically  
RASOMA Werkzeugmaschinen GmbH, 04720 Döbeln, Germany

### SLK Secure rail clamping

ACE clamping elements secure machines in the tyre industry. The goods accumulator/compensator of a material dispenser carries meandering, coiled, highly tear resistant material strips, which are fed at high speed to a tyre-manufacturing machine. To prevent damaging the machine, innovative type SLK25-1-6B clamping elements are employed.

Secure material accumulator

PN

## Clamping elements as a variable stop

ACE clamping elements are inserted, as a variable stop, during a joining process for the production of drilling tools. They meet the requirements for a precise positioning of the workpiece head and an adaptation of the length tolerance of up to 3 mm, ideally. ACE was awarded the contract because the clamping element is attached on a bar and its PN LOCKED series is specifically designed for this purpose. For clamping on linear guides, rails, axles and shafts, ACE offers a great range of high-performance models.

ACE clamping elements assist in the production of drilling tools: the LOCKED-P system clamps and at the same time absorbs the opposing forces of the joining process without difficulty  
GRAF automation GmbH, 88214 Ravensburg, Germany

PN

## Secure rod clamping

Pneumatic rod clamping allows hydraulic presses to be used for any application. With the help of hydraulic presses, cut ceramic parts are manufactured during the week. So that the rods of the upper and lower stamping plate do not sag when the press is at a standstill over the weekend or during holidays and therefore have to be setup again on the next working day, PN80-25-2-6B type rod clamps are used.

Secured Presses

## Lectures, training courses and a new demonstration vehicle

### Free and Convenient in your Premises

**Whether in the training vehicle or through lectures: we have a lot to tell. Images, tests and concrete products at your location convey information much more quickly and plausibly than speech or written materials.**

In our free specialised lectures we clearly demonstrate the function and mode of operation of the damping elements. Fast, compact and completely tailored to suit you. ACE presentations include video material, a lot of application images, drop tester and a pneumatic demonstration unit along with original "live" products.

We illuminate kinetic energies and the impact on production processes, design and mode of operation of shock absorbers, we compare techniques, calculate, perform tests and show typical applications.

### Even more Compact: Training in the ACE Demonstration Vehicle

In 60 minutes, everything about automation control, motion control, vibration control and ACE safety products. Right at your premises on the parking lot.

Learn how you can increase your production, go easy on your machines, reduce noise and vibrations, simplify designs and save costs.

**Ideal for smaller groups of about 8 people.**

# Fax Request

## Our free and fast service

Do you need the new main catalogue? Are you interested in ACE lectures and presentations? Or a training course in the ACE demonstration vehicle with field representatives of your choice?

We offer compact, tailored presentation packages. These illustrate the function and mode of operation of the ACE products – quickly and easily. At our place or yours!

Please also use our contact form at [www.ace-ace.com](http://www.ace-ace.com)

### Yes. We are interested in

- the new ACE catalogue
- a training in the demonstration vehicle
- product presentations in our premises
- a lecture at our site
- technical assistance at our site

### Topic

- Automation Control
- Motion Control
- Vibration Control
- Safety Products
